I would like to thank my mother Maja and my father Predrag for providing me with the support needed to even study at all and for being patient during all these years.

Special thanks to my lovely wife Petra for helping me find courage and willpower to overcome my demons and finally finish my thesis. Although they are still not fully aware, I also thank my children, Aleksandra and Petar, for inspiring me every day. I dedicate this paper to them.

I would also like to thank my advisor, Prof. Nikolaus Ritt, for reminding me how close I am to the finish and for patiently guiding me through the process of completing my thesis.

I also thank my whole family and all my dear friends for believing in me and for constantly reminding me that I can do better.

1. Introduction

The lexicon of the English language is unique in many different ways. Even surface knowledge of French or any other Romance language could provoke astonishment if one closely observed the English stock of words. About fifty per cent of everyday core vocabulary is not of Germanic origin, and even a complete layman can conclude that (cf. Winford 2003: 29). We all had some Latin in school (some more than others!), and a lot of people have some knowledge of at least one Romance language (French, Spanish, Italian etc.), so that everyone can notice this. As a result, everyone is aware of the influence that Romance languages had on English, but hardly any layman knows what happened linguistically in the *Age of Vikings* and afterwards.

A place where various cultures coincide and influence one another is usually particularly fascinating to observe and investigate. The course of history sometimes puts the most diverse civilisations in one place with the development of each taking a totally unexpected direction. Tribes are looking for new settlements, for arable soil and water crucial for survival. On their way, they stumble upon other tribes and sometimes these encounters are peaceful, but sometimes, unfortunately, they are not particularly peaceful. In any case, there is some cultural exchange, usually the less advanced civilisation profiting more from the encounter. This paper deals with a similar situation: a contact between two peoples being in focus.

As this paper involves a research in the field of linguistics, the main focus is on language, i.e. language change in a contact situation. More specifically, the topic is the lexical influence of Scandinavian language in the Middle English period.

In what way the Scandinavian loanwords established themselves in the ME period is the main research question. In other words, in what way the loanwords affect the lexicon. What factors can be determined as decisive for the competition and selection of words?

I intend to explain now, step by step, how the research unfolds and how I attempt to answer these questions. Along the way, the research question needs to be amplified in order to present the main goal of this paper that cannot be explained in one sentence. Inspired by the word field theory, I approach the question of Scandinavian lexical influence with an emphasis on semantic change in the event of 'competition between synonyms'. Therefore, as it is discussed in more detail later on, the analysis of word pairs (and changes in words' meanings caused by their interaction) are crucial in addressing the question of the establishment of Scandinavian words into the English lexicon.

Firstly, the beginning of the paper deals with the key concepts of lexicology and lexical borrowing. Before addressing the issue of Scandinavian loans, I look into the phenomenon of lexical exchange, especially in contact situations. To answer how Scandinavian loanwords have found their way into the English lexicon, it is beneficial to see how linguistic borrowing can be explained in general; how it happens, under what circumstances, and whether there are patterns that reoccur in those situations.

Considering language as a system, I introduce the concept of semantic field. The analysed loanwords are not to be considered in isolation, but rather as part of a 'greater picture', a structure where each constituent interacts with the other members. If any item changes or disappears, or a new item appears, this affects other parts of the system. This is necessary to clarify, in order to examine the examples properly and to obtain the right results. The following examples illustrate this (Vujovic, 2003: 19-21):

1) The OE form of *wrath* was *wræððu* whereas *ire* is a loanword from Old French that entered the lexicon in the ME period. In ModE *wrath* is used literary, *ire* is a formal expression and *anger* is a common, widely used term. *Anger* occurs much more often than *ire* and *wrath*. However, the adjective of *wrath*, *wroth* occurs more. We can conclude that the OE variant *wrath* is in decline and that borrowings had slowly taken their place. Its decline in use in the ME period can be seen as an intermediate stage in its way to ModE register-governed usage.

2) In OE period, two items had the same meaning i.e. OE *sweltan* and *steorfan*. The borrowing *die,* derived from the ON *deyja* 'to die', entered the English lexicon in the ME period. By looking at the ModE lexicon, we conclude that *sweltan* disappeared in course of time whereas *starve* and *die* survived with a slight change in meaning. To be exact, *die* preserved its original meaning whilst *starve* specialized in meaning and it denotes 'to die of hunger, to suffer from hunger'. It is interesting that at an intermediate stage it denoted 'to die of cold' but the important thing is that the semantic change was the same i.e. *specialization* (cf. ODEE s.v. *die*). In ME period, the situation is more or less like this: ME *sterve* still has the OE meaning 'to die' but it occurs less frequently. On the other hand, ME *swelt* barely occurs at all with a specialization in meaning i.e. it has the meaning 'to faint'. ME *die* (with different spellings like *dey*) occurs far more than the other two and has its ModE meaning 'to pass away'.

Secondly, some historical background is presented. In order to analyse the linguistic situation and subsequently the incorporation of loanwords, it is useful to see how Scandinavian and Anglo-Saxon speakers cohabitated at the turn of the second millennium. Some words are reserved for the most significant dates involving both parties. In the beginning, there were merely isolated encounters which lead to longer periods of Scandinavian settlement that finally resulted in the mixing of the Scandinavians and the Anglo-Saxons. A fair amount of text is devoted to the sociolinguistic situation at the time, particularly in the regions of heavy settlement. Here, the focus is on the two languages and the people as speakers of those languages. A discussion of the social factors that influence language change is provided.

Scandinavians first arrived for brief periods of time. However, after a little bit more than two hundred years, their visit of Britain eventually resulted in a Danish king being the ruler of England. This radically changed the attitude towards Old Norse as it was no longer the language of invaders but the language of the rulers. The language of the Vikings had 'higher prestige', its

usage being socially favoured. On the other hand, it must be pointed out that Old Norse was a Germanic language, its roots being in the north-west branch of Proto-Germanic. This reserves a 'special place' for its influence on English, with the other languages in contact being of different origin i.e. Romance and Celtic languages. The similarities between the two languages meant that some communication was much more likely and that the speakers of both languages picked up the other vernacular more easily. The degree of similarity between the two languages cannot be determined without a great deal of uncertainty (Kastovsky, 1992: 328). Unfortunately (and obviously!), there is only written data at one's disposal, and only vague assumptions can be made about the relationship between the spoken languages. This makes the task even more difficult, having in mind there is only written data to be analysed whereas the conclusions and theories about the speakers are based on the situations that involve only spoken data. The following examples,[1] taken from Rynell (1948: 14-15), are meant to illustrate how similar the two vernaculars were. The first word is of Scandinavian origin, the second one is native and the word in brackets shows the present-day meaning:

1.

a)	byrþ(e) – byrd(e)	(birth)
b)	blom(e), blomen – blos(t)me, blosmen, blowen	(bloom, blossom)
c)	brennen, brinnen – be(o)rnen, birnen, bærnen, barnen	(burn)
d)	egg – ey	(egg)
e)	har, hor – hær, her	(hair)
f)	geten – ʒiten, ʒeten	(get)
g)	kirke – chyrche, chirche, cherche	(church)
h)	benk, bink – bench, binch	(bench)
i)	gres, gris – græs, gras	(grass)

Thirdly, after the theoretical part and the historical background are discussed, the empirical part follows, in which I look for an answer to the question of how Scandinavian words entered the English lexicon, established themselves in the new 'environment' and stayed in the English stock of words up to today (or not!). To achieve this, two lists of word pairs are compiled from the second

[1] See example nr. 1.

edition of the *Penn-Helsinki Parsed Corpus of ME* (cf. Kroch & Taylor, 2000): one list of pairs consisting of one Scandinavian and one native word and the other list of pairs consisting of two native words. Each word pair consists of two (near) synonyms. The words are selected with the help of the OED [2] (http://www.oed.com, 14 December 2012), the MED (*MED Online*. http://quod.lib.umich.edu/m/med, 14 December 2012) and the HTE (*Historical Thesaurus of English* (cf. Samuels, 1964: http://libra.englang.arts.gla.ac.uk/historicalthesaurus, 14 December 2012). The set of word pairs with the words of Scandinavian origin are chosen by attempting to put together a loanword that has remained in the lexicon with a (near) synonym that either has disappeared over time or has changed its meaning.[3] The reason for this is to show how the lexicon changes with the arrival of new words and to illustrate that the most popular Scandinavian loanwords are not mere additions to the peripheral vocabulary, rather than everyday core-vocabulary words. The word pairs consisting of two native words are selected accordingly, by choosing two members of the same word field to focus on the 'rivalry' between them. The selection of word pairs is discussed in more detail before the actual analysis of the word pairs.

The reason I decided to use word pairs in the research can be summarised in these two points:

- to focus on competition between (near) synonyms and
- to question the role of word origin in the outcome of their 'competition'.

To relate this to the actual research question, it is through the interaction of members of each word pair that I attempt to investigate in which way they have 'competed' for a place in the English lexicon. By choosing two sets of word pairs, one with a Scandinavian item and one without it, I explore whether origin has played a significant role in the outcome of the competition of selected words. More specifically, I expect to learn more about how Scandinavian words

[2] The online edition of The Oxford English Dictionary will be referred to as the OED throughout the paper. As it is extensively used, especially in the research analysis, it will be quoted as *OED Online*.
[3] These meaning changes will be discussed in the theoretical part of the paper.

established themselves in the English lexicon by comparing and contrasting the patterns in the 'competition' between words of mixed origin with the correspondent patterns between exclusively native words.

The search for suitable words starts in the handbooks on historical linguistics where I look for the 'widely confirmed' Scandinavian loans. A glimpse into the HTE (*Historical Thesaurus*) follows, its aim being to find pairs of (near) synonyms. In the MED, I inspect whether these words are used in the ME period and examine their meaning as many present day meanings can be misleading. By using the etymological dictionaries, I check if Scandinavian words (in fact) are of Scandinavian origin.[4]

When the two sets of word pairs are established, the analysis of the corpus comes next. With the help of the computer program *Antconc,*[5] a concordance of all the words from the lists is run. Here, the most prominent part of the paper unfolds. The vital information expected, for instance, is the frequency of the words and the sub period in ME when they appear the most. Some words might not be localized in the corpus at all! Nevertheless, lack of results is a result. The description of these results is crucial to the findings. After the results are analysed and interpreted, it remains to be seen whether the questions that inspired the research can be answered.

In what way do the loanwords affect the lexicon and the word fields? Are some word fields 'better candidates' for the influx of new words? If yes, what are their main characteristics? Among the reasons Scandinavian loanwords penetrated the core lexicon of English might have been social factors. What have been the main obstacles of these loanwords on their way to becoming regular members of English word fields? When can one say that a word has 'won' the competition? When its meaning is more general? When it has become more frequent? Does the specialisation of a word's meaning necessarily make it a 'loser'? Certainly not all of these questions can be answered, and they are not

[4] The reasons why this presents a big problem will come up in the course of the research.
[5] A short description of the program is provided in the empirical part.

the main questions of the research. However, it is useful to think about them when approaching the data.

Finally, some more about the aims and the expectations of the research follows. Some of it was mentioned earlier, what is expected at the end of it is summarized, amplified and described.

The aims of the paper are to show in which ways the lexicon of a language is structured and how incorporation of foreign elements leads to a restructuring of the existing system. The contact of Scandinavian settlers with the native inhabitants in the *Middle Ages* seems to have resulted in a wide-scale lexical and grammatical borrowing. The approach to the problem is based on examples and their empirical study. The focus is on method rather than on quantity of the data. The main field of interest is the consequences of the incorporation of foreign lexical items into the English language.

The phenomenon of lexical borrowing and integration of Scandinavian loanwords into the English lexicon, analysed within a corpus and etymological dictionaries, gives a clearer picture and further proof for the already familiar notion. That notion is that the Scandinavian element is still evident in the present-day English. It is very intriguing to address the question of the coexistence and competition, with the emphasis on the rivalry between the members of word fields. Although perhaps an impossible task, it is worth the effort to investigate how exactly words compete with each other and displace one another in the course of time. What are the decisive factors? Is it possible to pin down exact reasons for the changes that have occurred and associate them to concrete linguistic factors?[6]

Although a story can be told a thousand times, there is always something left to be said, something no one has ever seen. A problem can be looked at from many different angles, and after all, theories are there to be questioned and

[6] It must be admitted that a lot has been written on this topic up to now. Every handbook dealing with the history of the English language has a chapter devoted to the Scandinavian influence. An explanation of core vocabulary words being incorporated into the lexicon makes an interesting read; a question that immediately arises is why write something there is so much written about.

tested. What is there so remarkable about these Scandinavian loanwords and why have they been ‘welcomed so warmly’? I chose the aforementioned two sets of word pairs to compare the way Scandinavian loans and native words have ‘fought’ for their place in the lexicon. **Is there something different about the borrowed ones, and if yes, what might that be?** Can it be explained? Questions evoke more questions, but that is good at the beginning of a project.

2. Lexicology and lexical borrowing: the key concepts

Before the key concepts of lexicology are discussed, it would be useful to reemphasize[7] why it is necessary to do so. In order to describe the changes in the ME lexicon caused by Scandinavian loanwords, the lexicon itself needs to be defined first. The term *word field* needs to be explained as well, so that it is distinguished (as clearly as possible) from the other terms like *lexical field*, *semantic field* etc. Each word pair analysed in the empirical part consists of two words that are members of a separate word field. Likewise, in the discussion of lexical borrowing and lexical integration, some theoretical questions are clarified. Several examples are provided to illustrate what phenomena the author intends to pursue.

2.1. Language and lexicon

> Der heutige englische Wortschatz ist eine einzigartige Mischung von germanischen und romanischen Elementen; in bezug [sic] auf das Vokabular stellt denn das Englische einen Sonderfall unter allen uns bekannten Sprachen dar, und hier stellen sich auch mannigfache Probleme, denen man in den andern Sprachen nicht begegnet (Leisi 1955: 46).

A lexicon of a language is not simply a list of items with no connections among one another. It is not "an inventory of […] isolated elements" (Lipka, 1992: 4), even though historically speaking, it is an accumulation of words. Every word is part of a system and the idea that language is a system goes back to Saussure (1967: 241-2, quoted in Thibault 1997: 42):

> Language […] has fundamentally the character of a system which is founded on oppositions. […] There is in the language system only the interplay of these units in relationship to each other.

The concept of a *system* is applicable to different levels of linguistic organisation (e.g. phonology, morphology etc.). Change within a word field[8] e.g. loss of an item, appearance of a new item or a change in an item's

[7] cf. Introduction.
[8] Definition follows in the next chapter.

meaning may cause immediate changes in the whole system. Each word acquires a new set of properties according to speakers' needs. If a word acquires new meanings or changes its meanings, we talk about semantic changes and the most common semantic changes are *extension* or *generalisation* and *narrowing* or *specialisation*. Here are the definitions from Crystal (2008: s.v. *narrowing*, *extension*):

> **narrowing** (*n.*) In HISTORICAL LINGUISTICS, a term used in the classification of types of SEMANTIC change, referring to a restriction of meaning in a LEXICAL item; opposed to EXTENSION. For example, in Old English *mete* 'meat' referred to food in general, whereas today it refers to only one kind of food.
>
> **extension** (*n.*) […] (2) In HISTORICAL LINGUISTICS, **extension** is used in the classification of types of SEMANTIC change, referring to a widening of meaning in a LEXICAL item; opposed to NARROWING. For example, in Latin 'virtue' was a male quality (cf. *vir* 'man'), but today it applies to both sexes.

To illustrate this in the historical context, the following example is taken from Schendl (2001: 33):

> […] the broad meaning of Old English *heofon* 'heaven and sky' narrowed down to 'heaven' as a result of the borrowing of Scandinavian *sky*, which originally meant 'cloud'.

Relations between words can be categorized and we distinguish terms like synonymy, antonymy, homonymy etc. John Lyons (1968: 443), who introduced the term *sense relations*, is responsible for the hypothesis that relations between meanings are more valuable than meanings in isolation:

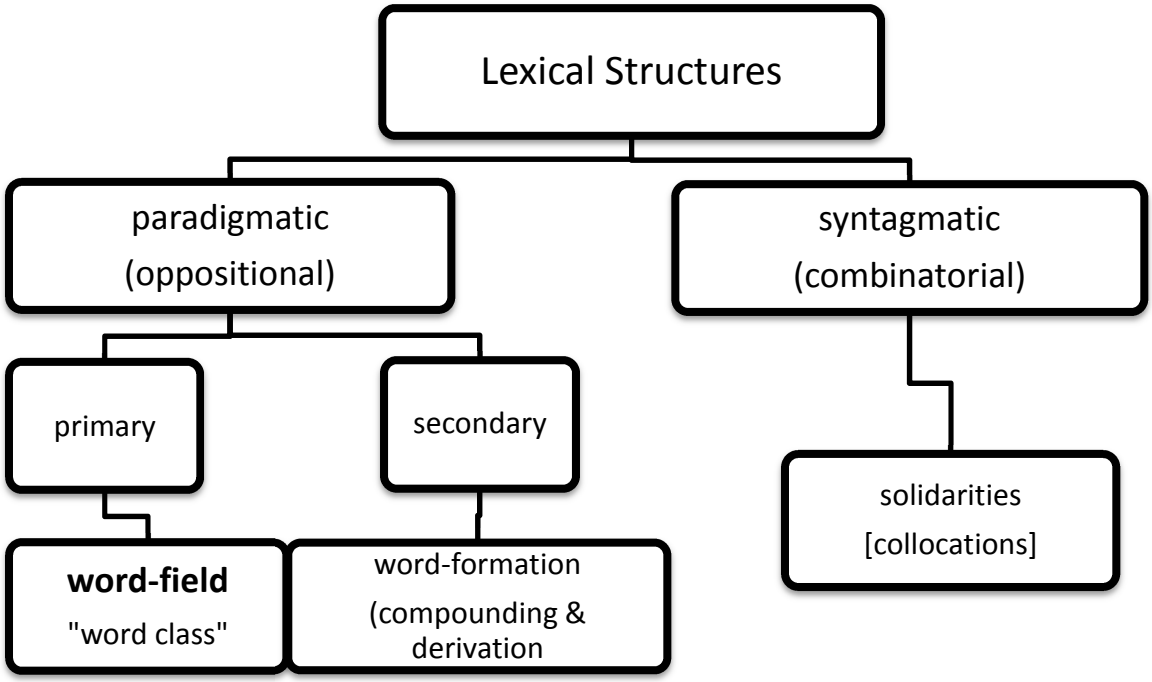
> […] the sense of a lexical item may be defined to be, not only dependent upon, but identical with, the set of relations which hold between the item in question and other items in the same lexical system.

Another linguist with significant influence in this area is Leonhard Lipka (1992: 4) and here is what he says about the lexicon in general.

> If we consider language as a system of signs, […] then we may distinguish at least two types of structure in the 'lexicon': external (to the word) and internal structure. Full words may substitute for each other, i.e. be in opposition, or they may combine with each other. Such paradigmatic and syntagmatic relations constitute external structure.

When describing and analysing lexical structure, Coseriu (1970: 166) presents the following figure[9] (cf. Lipka, 1992: 11). It is introduced to announce the topic of the next chapter i.e. the word field study and to 'locate' the term in the primary paradigmatic relations of the lexical structures.

Figure 1: Lexical Structures



Is it possible to know whether something is 'beautiful' if we do not know what 'ugly' is?[10] Previous research has shown in what way the items of a language are dependent on each other and to assume what consequences are possible if members of a system are subjected to change.

Some of the consequences of lexical borrowing lead to a development called *dissociation*. The definition and a few examples can be found in Leisi (1955: 58):

> Die deutschen Wörter *mündlich* und *Dreifuß* stehen formal nicht allein, sondern sie sind leicht mit andern Wörtern in Beziehung zu bringen, mit denen sie formal und bedeutungsmäßig verwandt sind: *mündlich* mit *Mund*, *Dreifuß* mit *drei* und *Fuß*; diese Wörter sind also

[9] See Figure 1.
[10] We use language to create reality according to some theories, but since this is not the topic of this paper it will be left out.

> unter sich gewissermaßen vergesellschaftet (konsoziiert). Anders verhält es sich mit den englischen Entsprechungen *oral* und *tripod*. Diese beiden haben keine Verwandtschaftsbeziehung, die zugleich Laut und Bedeutung einschließt: die bloß lautlich Verwandten (*or* = oder, *tripe* = Kaldaunen u.a.) haben sinnmäßig nichts mit ihnen zu tun, die sinnmäßig verwandten (*mouth* oder *stool*) klingen vollkommen verschieden. Die Wörter *oral* und *tripod* gehören also nicht einer etymologischen (laut- und sinnverwandten) Familie an, sondern sie stehen allein, gleichsam asozial da. Eine Entwicklung, die in der Richtung geht, die Wörter asozial zu machen, sowie den durch sie erreichten Zustand nennen wir im folgenden Dissoziation.

In the OE period, the situation was similar as in Modern High German. The vocabulary was characterized by consociation [11] i.e. compounds were transparent so that almost each and every one could be analysed by its constituents. Words describing new concepts e.g. *ecclesiastic* or *scientific* vocabulary were not borrowed but constructed from existing simple words. To illustrate this, a couple examples are included from Ernst Leisi's *Das heutige Englisch*:

> Zur altenglischen Zeit […] [s]elbst neue Begriffe aus dem kirchlichen und wissenschaftlichen Bereich wurden oft nicht durch ein fremdes Wort wiedergegeben, sondern durch eine einheimische Bildung, die sich als neue Verwandte den bestehenden Familien einfügte: *bōceras* (Schriftgelehrte) zu *bōc* (Buch) für heutiges *scribe*, *tungol-witegan* (Sternweise) zu *tungol* (Stern) für heutiges *Magi* (drei Könige) (Leisi, 1955: 58-59).

In Modern English, the situation is entirely different: the vocabulary consists of numerous loanwords, mostly from French and Latin and remarkably often compounds are obscure because they consist of items that have different etymologies. Moreover, Old English was not so hospitable to words from other languages; new words were built by using the existing word stock (Horobin & Smith, 2002: 71). On the contrary, the habit of incorporating foreign items became a characteristic feature of Middle English.

On the whole, Leisi praises the "international character of the [English] vocabulary" (Leisi 1955: 52f., quoted in Lipka, 1992: 7):

[11] "[E]ine Fähigkeit zur selbständigen Wortbildung und eine Widerstandskraft gegen Fremdwörter" (Leisi 1955: 59).

> Its great richness allows far finer differentiation in comparison with other languages. For example German *Tier* corresponds to either *animal* or *beast* in English. German *Wagen* can be rendered by a series of English translations, such as *car, cart, carriage*, and *chariot*. As equivalents of *nachdenken* or *überlegen*, English has *think, reflect, meditate, ponder*, and *cogitate*. (Leisi 1955: 53., quoted in Lipka, 1992: 7).

2.2. Word field studies

> Kein ausgesprochenes Wort steht im Bewußtsein des Sprechers und Hörers so vereinzelt da, wie man aus seiner lautlichen Vereinsamung schließen könnte. Jedes ausgesprochene Wort läßt seinen Gegensinn anklingen. Und noch mehr als dies. In der Gesamtheit der beim Aussprechen eines Wortes sich empordrängenden begrifflichen Beziehungen ist die des Gegensinns nur eine und gar nicht die wichtigste. Neben und über ihr taucht eine Fülle anderer Worte auf, die dem ausgesprochenen begrifflich enger oder ferner benachbart sind (Trier, 1931: 1).

This chapter starts in German because one of the most distinguished linguists, who contributed significantly to the field,[12] is the German linguist Jost Trier. He is often considered as the true founder of the *word field theory*. First the typology of the word field theory is presented along with the relevant theoretical and empirical work that has been done on the subject.

> Field-theory has a long tradition in European linguistics and all sorts of typologies have been proposed for it. [The] work on the subject has been done mainly by Coseriu, Geckeler, Lehrer, and [Lipka]. The terminology is extremely confusing […] Cruse (1986: 112ff) speaks of *lexical configurations*, while for Lehrer (1974) the terms *semantic field* and lexical *field* are synonyms. Coseriu, who uses *Wortfeld* (translated as *lexical field* in the English version) distinguishes these (cf. Coseriu/Geckeler 1981: 58f) from: a) scientific taxonomies, b) categories of subject matter ("Sachbereiche"), c) associative fields, and d) conceptual fields. For him, all lexical fields are necessarily conceptual fields. For him, all lexical fields are necessarily conceptual fields but not vice versa (Lipka, 1992: 151-152).

Lipka (1992: 152), however, makes a significant distinction in his contribution to the field-theory research:

[12] A deliberate pun!

> […] I have introduced a finer distinction between the more comprehensive *lexical field* (consisting of simple or complex lexemes) and the *word-field* (exclusively containing morphologically simple items) […] One of the reasons for doing this is the concept of 'lexical gap', which can only be proved to exist in structures of simple words. If complex lexemes are admitted in such a field, the productive word-formation processes may close such a gap at any time. […] Another, more important, subcategorization in our context is the differentiation between linear and hierarchic fields.

Subsequently, three conditions for a membership in a *field* are established (partly on the basis of Coseriu) in Lipka (1980: 98, quoted in Lipka 1992: 152):

> 1. items must be in direct opposition in the same syntactic slot, i.e. belong to the same word class, 2. they must have at least one specific semantic component in common, 3. field-membership must be established by objective procedures.

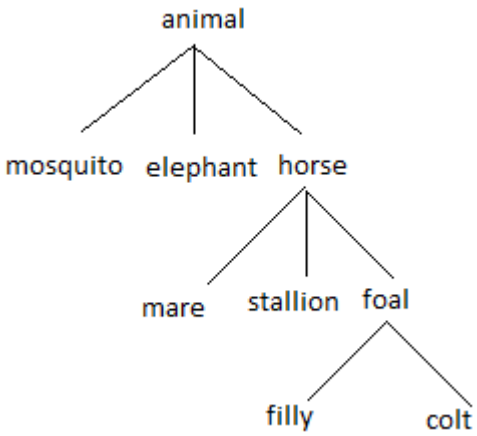
Having in mind the theory presented, the most significant term for the research of this paper is the *word field*,[13] as defined by Lipka in the previous citations, which consists only of simple words. The complex words are not analysed because it is already complicated enough to handle simple words. Later on, in the empirical part, the effect of the incorporation of the Scandinavian words is examined. Here the phenomena of semantic change i.e. *extension* and *narrowing* are expected to occur in many examples. Hence, the word fields intriguing for the purposes of this paper are the aforementioned *hierarchic fields* that are now presented:

> Hierarchic fields are based on the sense-relation of hyponymy (or inclusion) and can normally be replaced by an archilexeme. […] In principle, the differences between co-hyponyms are always neutralized in the archilexeme, and there are archilexemes on all levels, except for the lowest one. This is because hyponymy is a relative concept (Lipka, 1992: 152-155).

The figure number 2, taken over from Lipka (1992: 155), illustrates the hierarchic fields in the example of *animal*. To put this into the context of the research question: imagine a scenario where a foreign word is introduced with the same meaning as *horse.* What would happen to this *word field*? Would the meaning of *horse* change, e.g. *narrow* and join the level below with *mare, stallion and foal* and denote a concrete kind of *horse*?

[13] See Figure 1 from the previous chapter.

Figure 2: The hierarchic field of animal



The relations between members of word fields are relevant for the empirical analysis of the corpus. However, it has to be pointed out that the research does not involve *word fields* per se i.e. it does not explore the relations between all members of a *word field*. The *word field theory* inspired the method of this research and the relations among members of word fields serve as a concept for assessing rivalries between words. This paper analyses mechanisms of competition involving two words that belong to the same word field. In other words, this paper investigates relations within 'small' *word fields*, consisting of only two (near) synonyms.

It remains to be seen what changes have occurred following the influx of Scandinavian loanwords into the English lexicon. The focus of the next chapter is on various views on how a system responds to changes in word stock, especially through 'arrival' of new words.

2.3. Lexical borrowing and its effects

> Most English speakers would be surprised to learn that 75 per cent of the words in their language were "borrowed" from other languages during the course of its history. Few speakers are aware that many commonplace words derive from foreign sources, for instance *people*, *nation*, and *clergy* from French, *cheese* and *table* from Latin, *zero* from Arabic, and so on (Winford, 2003: 29).

In a situation where two languages are in contact, borrowing is an influence on the lexicon and structure of a native language from the external language. According to Thomason & Kaufman (1988: 37), borrowing can be categorized as a special type of language interference i.e. *borrowing interference*, which is clearly distinguished from the so-called *interference via shift*, and it can be referred to as "the incorporation of foreign features into a group's native language by speakers of that language". The borrowing language is changed in a certain manner by the borrowed features, its native speakers being the agents of change (cf. Winford, 2003: 12). Interference via shift "implies [an interference due to] the gradual or complete abandonment of a previous native language in favour of the T[arget] L[anguage]" (Winford 2003: 16). An example of the interference via shift is the influence Scandinavian settlers caused in the ME period once they switched to English because the contact to their homeland was broken.

Einar Haugen is one of the "key figures in the study of language contact" (Field, 2002: 8). In his *Analysis of linguistic borrowing*, he comments that, perhaps, the term *borrowing* is not so 'perfect' as it is widespread.

> At first blush the term "borrowing" might seem to be almost as inept for the process we wish to analyse as "mixture." The metaphor implied is certainly absurd, since the borrowing takes place without the lender's consent or even awareness, and the borrower is under no obligation to repay the loan. One might as well call it stealing, were it not that the owner is deprived of nothing and feels no urge to recover his goods. The process might be called an adoption, for the speaker does adopt elements from a second language into his own. […] The real advantage of the term "borrowing" is the fact that it is not applied to language by laymen. It has therefore remained comparatively unambiguous in linguistic discussion, and no apter term has yet been invented (Haugen 1950: 211-212).

The following classification of the borrowing terminology is taken from Haugen (1950: 214-215):

1. **Loanwords**: a general term; it might also encompass the other two. Usually limited to terms where speakers import the phonemic shape as well as the meaning of the form.

2. **Loanblends**: speakers not only substitute native sounds for foreign ones but go further in their adaptation. These 'hybrids' involve a certain degree of analysis by the speakers.
3. **Loanshifts**: include types usually called *loan translations*, *semantic loans*; appear merely as functional shifts of native morphemes in the borrowing language.

For the purposes of this paper, only the term *loanword* is used. The phonemic or morphemic analysis is not pursued. Nevertheless, it is useful to be acquainted with the terminology

A detailed explanation of borrowing, which is also useful for the purposes of this paper, is found in Winford (2003: 12).

> Borrowing may vary in degree and kind from casual to heavy lexical borrowing, and from slight to more or less significant incorporation of structural features as well. […] [S]ituations involving primarily lexical borrowing, that is, borrowing of content morphemes like nouns, verbs, etc., are extremely common, and most, if not all, languages have been subject to this kind of influence at some time or another. Sometimes, […] significant lexical borrowing may have effects on the lexical semantics as well as other aspects of a language's structure. Situations involving structural borrowing, that is, borrowing of features in phonology, morphology, syntax, and semantics, are somewhat rarer, though examples can be found.

The table number 1 is taken from Winford (2003: 30),[14] and it illustrates the *borrowing scale* i.e. the relationship between the intensity of the contact and features that are borrowed. In the section on the contact between Scandinavians and Anglo-Saxons,[15] the nature of this contact is examined along with the intensity of the borrowing. The table is included for this reason. However, it needs some clarification:

> The scale consists of five stages or levels representing increasing intensity of contact, and increasing typological distance. […] Features at the top of the scale are borrowed first. The presence of borrowed features lower on the scale implies the presence of features placed higher. Two broad issues arise here. First, we need to clarify notions such as "intensity of contact" and "cultural pressure" if we are to understand the social influences on various types and

[14] Based on Thomason & Kaufman (1988: 74-6).
[15] Cf. section 3 of this paper.

> degrees of borrowing. Is it true that there is a clear correspondence between degrees of contact and cultural pressure on the one hand, and degrees of structural borrowing on the other? Answers to this can be found only in a thorough examination of the social contexts of borrowing. Second, we might question whether the kind of extreme structural changes claimed for stages 4 and especially 5 of Thomason and Kaufman's borrowing scale are really cases of borrowing at all, in the strict sense of that term, that is, as changes initiated by recipient language speakers (Winford, 2003: 29-30).

The purpose of this paper is to answer similar questions as found in the citation above; e.g. to examine the degree of contact in the Danelaw and to see whether the intensity of the contact and the social factors determine the intensity of the borrowing. In this paper, only lexical borrowing is investigated; however, it is useful to get acquainted with the structural borrowing as well as it is one of the features that make the linguistic situation in the Danelaw 'special'.

Table 1: The borrowing scale

Stage	**Features**
1. Casual contact	Lexical borrowing only
2. Slightly more intense contact	Slight structural borrowing; conjunctions and adverbial particles
3. More intense contact	Slightly more structural borrowing; adpositions, derivational affixes
4. Strong cultural pressure	Moderate structural borrowing (major structural features that cause relatively little typological change
5. Very strong cultural pressure	Heavy structural borrowing (major structural features that cause significant typological disruption)

Winford (2003: 37) states that "[t]he motivations for and extent of lexical borrowing depend on a range of social factors that vary from one situation to another". He further highlights the two factors that have been often mentioned

when describing such situations i.e. *need* and *prestige*. The factor of need is discussed in the next chapter on the reasons for lexical borrowing and the work of Uriel Weinreich. The notion of prestige in bilingual situations is presented here.

The case of prestige under distant contact, e.g. the prestige English has nowadays because of television and internet are not of interest. The focus of this paper is on linguistic borrowing under close contact:

> In situations of bilingualism […] the motivations […] depend on a range of macro- as we as micro-sociolinguistic factors that vary from one community to another. The macro-level factors include those relating to notions like "intensity of contact," "cultural pressure," and language attitudes. […] [I]ntensity of contact is a function of factors such as demographic rations, the sociopolitical relationships between groups, the length of the contact, and the degree of bilingualism across groups. Cultural pressure is a function of the social motivations that promote the adoption of foreign features into a group's L1. These include social and economic advantages that follow from such borrowing, among them social advancement, employment, educational opportunity, etc. Finally, degree of borrowing is dependent on the social values attached to each language, that is, their relative prestige, the degree of loyalty to each, and other ideologies regarding the tolerance of foreign interference or language mixture of any type (Winford, 2003: 38-39).

Borrowing tends to frequently happen from a more prestigious into a socially subordinate language. The speakers tend to regard borrowing from the higher language as more refined or simply associate it with higher status.

In the next chapter, as already mentioned, a study by Weinreich (1970: 53-63) is introduced. This is a detailed and well-organized study on language contact. In the subchapter on lexical integration of loanwords he clearly differentiates between different kinds of effects on recipient language vocabulary. Apart from that, some reasons for the integration of foreign words into a language lexicon, as well as some typical cases of lexical interference among bilinguals, are listed.

2.4. Lexical integration and its reasons

> The vocabulary of a language, considerably more loosely structured than its phonemics and its grammar, is beyond question the domain of borrowing *par excellence* (Weinreich 1970: 56).

> "Few users of language are poets" (Weinreich 1970: 57).

According to Weinreich, the interest for the lexical integration of loanwords has been in the shadow of various studies on their phonic and grammatical integration for a long time. In spite of that, the effects that follow the integration of loanwords into a lexical structure can be tremendous. The results can be easily observed on the miniature semantic systems[16] of the lexicon. Further lines are dedicated to the classification of the effects of loanwords.

> Only the most concrete loanwords, such as designations for newly invented or imported objects, can be thought of as mere additions to the vocabulary. […] Except for loanwords with entirely new content, the transfer or reproduction of foreign words must affect the existing vocabulary in one of three ways: (1) confusion between the content of the new and old word; (2) disappearance of the old word; (3) survival of both the new and old word, with a specialization in content (Weinreich, 1970: 53-54).

The number (3) of the citation above is illustrated in the example from Schendl (2001: 33) from page 10. After the incorporation of the Scandinavian word *sky*, the meaning of the OE *heofon* ***narrowed,*** or to use Weinreich's terminology: ***specialized***. There are various examples of this phenomenon in ME, some of which are discussed later on. The list of the items includes the Scandinavian loanword *sky* and its equivalents in ME which are subsequently discussed in more detail.

However, as it was already argued at the beginning of the citation above,[17] the need to name new things (the most concrete loanwords) is not the only reason why foreign words are borrowed.

[16] Weinreich's expression for semantic fields.
[17] Cf. Weinreich (1970: 53-54).

> Internal linguistic factors also contribute to the innovating process. One such internal factor is the LOW FREQUENCY of words. It has been shown that, other things being equal, the frequent words come easily to mind and are therefore more stable; relatively infrequent words of the vocabulary are, accordingly, less stable, more subject to oblivion and replacement (Weinreich 1970: 57).

An example to illustrate this is taken from Russian: in the dialect of the Slavic language alongside the Finnish border, infrequent and unstable names for parts of tools are also rather different from one location to another. As a result, Finnish loanwords are used to name these things even though there is no cultural borrowing (cf. Weinreich, 1970: 57).

However, Field (2002: 6) advises caution when frequency is considered as a cause of borrowing:

> [T]he frequency of a particular word in a language (e.g., in corpora formally obtained from a wide range of native speakers or written texts) does not necessarily determine an individual or identifiable group of borrowers' relative exposure to that form. For example, a typical native speaker of, say, Spanish in Mexico City may not be exposed to agricultural or other terms from specific semantic fields (e.g., occupational nomenclatures) to the same degree as a bilingual speaker (of relative proficiency) of Spanish and Modern Mexicano (Náhuatl) in the relatively remote Malintzin (Malinche) region of central Mexico who may have more intense exposure to such terms as a consequence of his/her expertise in a particular occupation. In addition, many bilinguals are likely to have access to a somewhat narrower range of registers of speech in one or both of their languages as a result of socioeconomic conditions, hence, fewer semantic types (cf. Grosjean 1995: 259), especially if they are systematically restricted as a consequence of subservient or subordinate social status.

The second reason, following Weinreich, may be the existence of a *dangerous homonymy*[18] within a language.

> Another internal factor conducive to lexical innovation is pernicious HOMONYMY. […] Suffice it to say that sometimes a word seems to have been borrowed from another language in order to resolve the clash of homonyms. For example, it is alleged that because of the clash between the words for 'cart' (<CARRUM) and 'meat'

[18] A homonymic clash or conflict is said to have occurred when there is ambiguity between homonyms (whether non-deliberate or contrived, as in riddles and puns) (Crystal 2008: 231).

> (<CARNEM), the Vosges patois [19] borrowed *voiture* and *viande* from French (Weinreich, 1970: 57 – 58).

Finally, Weinreich claims that there are certain *lexical fields* which are in constant *need for synonyms*. These fields include, for example, 'talking', 'sleeping', 'ugliness' etc. (cf. Weinreich 1970: 58).

> A third reason for lexical innovation is related to the well-known tendency of affective words to lose their expressive force. […] [C]ertain notions seem to attract a multitude of designations, just as some individuals tend to evoke nicknames while others do not. […] Where synonyms are available from another language, they are gladly accepted; the cause of the lexical aggrandizement can be said to be inherent in the recipient language. Such is the reason for the borrowing of many words from Finnish into dialectal Russian, for example, which cannot be explained as designations of cultural innovations. A language can also satisfy its ever-present need for euphemisms and slangy "cacophemisms" by borrowing (Weinreich, 1970: 58).

These three are the main internal reasons mentioned by Weinreich. The discussion on historical background of the Scandinavian influence in Old and Middle English follows in the next chapter. The notions on lexical structure are crucial in presenting the examples.

3. Language contact in England: Vikings and Normans

3.1. Historical survey

3.1.1. Vikings in England

> [T]his co-existence of English first with the Germanic language of Scandinavian settlers, and subsequently with French, with Latin as an ever-present background, has largely formed the English lexis which survives to this day (Burnley, 1992: 414).

A brief summary of the Scandinavian raids and settlements, as well as specifying some notable dates and events, is certainly beneficial for the understanding of contact between the Englishmen and the 'Northmen'. On the other hand, going into too many details would also be a mistake and, therefore, only an outline of the most notable events and names is provided.

> The Scandinavian invasions of England exerted a profound influence on almost all walks of life of its English inhabitants at the time, beginning with customs and manners and ending with administration, legislation, jurisdiction and the English language (Fisiak, 2005: 48).

The first time that a Viking attack is recorded in the *Anglo-Saxon Chronicle*[20] was in the year 787. These attacks were at first merely raids and plundering, until the Danes decided to winter in England for the first time in 851. Among the places plundered were the monasteries of Lindisfarne and Wearmouth, the centres of learning and Christendom. The Vikings would arrive in spring and take the swag back home in late summer. They were particularly interested in various valuables "such as robes, gold and silver objects, jewelled shrines, etc., as well as to take slaves" (Fisiak, 2005: 48). According to Fisiak (2005: 48-49), there are two stages of these early attacks:

> The first stage of Danish invasions from 787 to c. 850 was characterized by shallow penetration of the coastal area, usually ten to fifteen miles inland, plundering of towns and monasteries and a relatively quick return to the bases on the English coast or back home. The size of the invading forces varied from a few ships to over a hundred. […] The second stage of Danish invasions was marked by the participation of large and well organized forces,

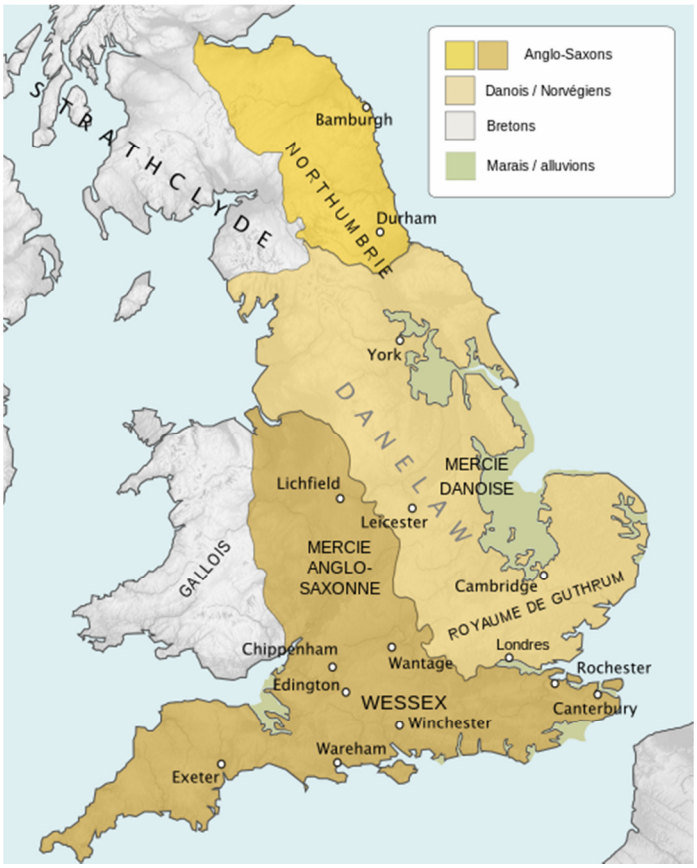
[20] For reference, see Dumville: 1995.

> whose aim was not only plunder but also the occupation and settlement of the invaded land.

Permanent Danish settlements followed shortly after and lead to the cohabitation of the two peoples. King Alfred the Great and Guthrum, the Danish leader, signed the Treaty of Wedmore in 886, which resulted in the establishment of the Danelaw – the part of the country governed by Danish law (Fisiak, 2005: 49). The following description of the boundaries of the Danelaw we find in Blake (1996: 78):

> Essentially the country was divided along a line drawn roughly from London to Chester. Anything south and west of that line belonged to Wessex; anything north and east to the Danes. […] What is significant about this division is that the West Midlands, which had been part of the Mercian kingdom, now fell to the West Saxon monarchy.

Figure 3: The Danelaw



Other important part of the agreement was that Guthrum would accept Christianity. This treaty meant that Wessex was saved and the invaders were confined to a specified territory. In this part of the country the Danes settled among the Anglo-Saxons. In spite of all the hostility, the two peoples also lived peacefully side by side and this specific sociolinguistic situation is particularly valuable when trying to assess the amount of Scandinavian influence on the English language. Among the invaders, three groups can be distinguished. As explained in Barber (2000: 128):

> The Vikings consisted of Swedes, Norwegians, and Danes. The Swedes mostly went eastwards, to the Baltic countries and Russia, while the Norwegians and Danes tended to go westwards and southwards. The Vikings who attacked England were referred to by the Anglo-Saxons as *Dene* 'Danes', but there were also Norwegians among them.

The study of Scandinavian place-names serves as the best evidence of where each group of invaders roamed and settled. For the purposes of this paper, it is not of vast importance to know who exactly went where. The difference between English and Scandinavian is a controversial issue, and we cannot say exactly how similar the languages were. It is not difficult to conclude that to determine the differences between each Scandinavian language can be extremely complex. The question of mutual intelligibility is addressed in the subsequent chapters as it is of vast importance to this paper. Further developments concerning the Scandinavian settlements are summarized in Blake (1996: 81):

> Alfred's response to the Scandinavian settlements in the Danelaw took two forms, one political and the other educational. The political response took the form of repairing the defences of his own kingdom by building a succession of forts to protect its boundaries and gradually penetrating into the Danelaw and establishing new forts there to safeguard the West Saxon reconquest of what had originally been Mercian territory. The educational response took the form of initiating a series of translations and other writings which were distributed over those parts of the country that owed allegiance to the West Saxon king.

It is believed that Alfred the Great died in 899, Edward the Elder being his sole heir. Edward, on the other hand, had three sons: Athelstan, Edmund and

Eadred. Alfred's successors were slowly reclaiming land from the Danes and thus advancing the boundaries of Wessex (cf. Blake, 1996: 81-82).

> By 917 the eastern half of England […] had come under West Saxon control; by 920 the boundary had been pushed northwards to a line from Chester to the Humber; and by 927 Yorkshire and Durham had been incorporated in the West Saxon kingdom. Edward had died in 924, and it was his son Athelstan who made the final extension of the West Saxon kingdom. […] Wessex supremacy was confirmed by the Battle of Brunanburh, the precise location of which remains uncertain, in 937. From this time the kings of Wessex could justifiably claim to be kings of England. For the first time since the departure of the Romans, England was once again a single political entity though now it was and Anglo-Saxon one (Blake, 1996: 82).

During their attacks and plundering, Vikings destroyed monasteries that were prominent centres of learning at the time. King Alfred realized the importance of the situation and that learning was decaying (cf. Blake, 1996: 81). One of his efforts to revive it was to "increase the respect for English because it could be seen as an alternative to Latin" (Blake, 1996: 83). Although this period of West Saxon rule was prosperous, a new series of Danish invasions followed, leading to one of the two main conquests of England within a hundred years.

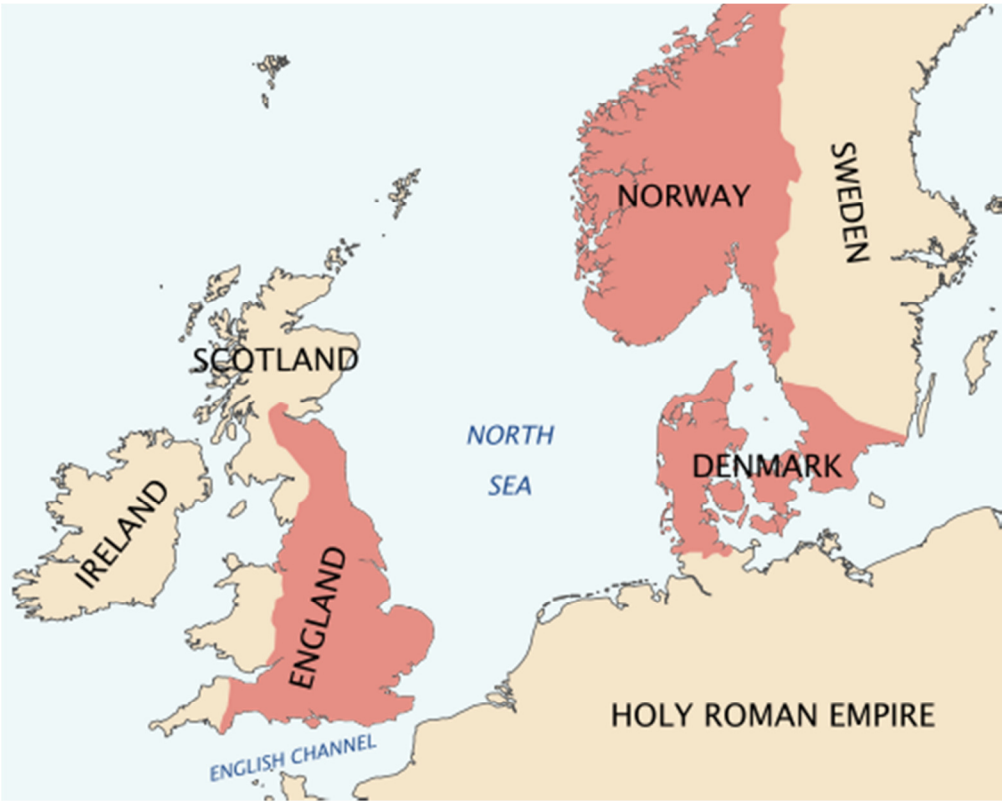
The Battle of Maldon in 991, described in a famous poem, was one of the bitter defeats of the English. The old custom of paying tribute to the Danes in order to keep them at bay continued under Aethelred the Unready. The West Saxon reign was under fire and the situation deteriorated rapidly as described in Baugh & Cable (1993: 92):

> [A] substantial Viking fleet, which may have been under the command of Olaf Tryggvason, attacked and pillaged various towns along the southeast coast of England. It then sailed up the Blackwater to the vicinity of Maldon, where it was met by Byrhtnoth, the valiant earl of the East Saxons […]. Here the English, heroic in defeat, lost their leader, and soon the invaders were being bribed by large sums to refrain from plunder. The invasion now began to assume an official character. In 994 Olaf, who shortly became king of Norway, was joined by Svein, king of Denmark, in a new attack on London. […] Finally Svein determined to make himself king of the country. In 1014, supported by his son Cnut, he crowned a series of victories in different parts of England by driving Æthelred, the English king, into exile and seizing the throne. Upon his sudden death the same year his son succeeded him. Three years of fighting

established Cnut's claim to the throne, and for the next twenty-five years England was ruled by Danish kings.

The establishment of Danish kings in England meant massive settlement from across the sea would follow. This settlement is confirmed by some 1400 place-names of Scandinavian origin. Most of the settlements were naturally in the north and east of the country. Some of the settlers "intermarried with the English, adopted many of their customs, and entered into the everyday life of the community" (cf. Baugh & Cable, 1993: 93).

Figure 4: Canute's Kingdom



In Baugh & Cable (1993: 93) the aforementioned cohabitation is explained in detail:

> The amalgamation of the two peoples was greatly facilitated by the close kinship that existed between them. The problem of the English was not the assimilation of an alien people representing an alien culture and speaking a wholly foreign tongue. The policy of the English kings in the period when they were reestablishing their control over the Danelaw was to accept as an established fact the

> mixed population of the district and to devise a *modus vivendi* for its component elements. In this effort they were aided by the natural adaptability of the Scandinavian. […] It would be a great mistake to think of the relation between Anglo-Saxon and Dane, especially in the tenth century, as uniformly hostile. One must distinguish, […] between the predatory bands that continued to traverse the country and the large numbers that were settled peacefully on the land.

Although England was the most valuable part of his realm, the Danish king Canute also had to spend time on other parts of it. Thus, he divided England into four parts and appointed an earl to rule each one of them. After the end of the Danish royal line, Edward the Confessor returned from his exile in France to claim the throne.

> Edward did not have the same authority or personal reputation as a warrior which Canute had enjoyed, and this allowed the governors of the four regions in England to assume greater personal power in the kingdom. Meanwhile the other parts of Canute's empire were being fought over by his relatives; in England the outcome of this struggle was watched with some trepidation since whoever emerged as the successful contender in Scandinavia could then turn his attention to regaining control of England. Nevertheless, Edward disbanded the fleet which had been held in readiness to prevent the landing of any invasion force from Denmark or Norway (Blake, 1996: 106).

Harold Godwinson took over the throne after Edward the Confessor had died in 1066. His father was Earl Godwine of Wessex, one of the four earls chosen by Canute to govern a province. In the Anglo-Saxon England, the crown was elective; therefore the lack of royal blood was not a problem in Harold's case. Because of his leadership qualities that were tested immediately, he was an excellent candidate for the throne. In Norway, Harold Hardrada claimed the throne as Canute's heir, having had in mind the situation in England (cf. Blake: 1996: 106).

> The death of Edward and the succession of Harold prompted a rebellion in Northumbria against Tostig, who was both Harold Godwinson's brother and the earl there. Tostig was deposed as earl and went into exile. This provided a motive for Harold Hardrada to assert his claim to the English throne. He led an expeditionary force to England and when he arrived in the Humber he joined forces with Tostig; together they had some 300 ships. Harold Godwinson rushed north to defend his kingdom and on 25 September he attacked the combined Norwegian and rebel English force at Stamford Bridge on the River Derwent (Blake, 1996: 106-107).

Harold Godwinson caught the enemy by surprise and succeeded in defeating the invaders. However, he learned immediately that William of Normandy had landed on English soil with his army. William the Conqueror backed his throne aspirations by an oath sworn to him by Harold Godwinson in Normandy. True or false, he used it as a pretext for invading Britain (cf. Blake, 1996: 107).

Upon hearing the news, Harold rushed south to defend his throne from William and on October 14 at Hastings, the historic battle occurred. The aftermath was William's victory and Harold's death. William was the new king of England, and the Anglo-Saxon monarchy ceased to exist (cf. Blake, 1996: 107).

3.1.2. Norman invasion

> Regardless of the exact number of Norman settlers in England, one thing remains unquestionable: Since they were the people who ruled both the country and the church, their influence went far beyond their numerical strength (Fisiak, 2005: 62).

At first, the new king had to stamp his authority in his new kingdom and was welcomed by revolts of the Anglo-Saxons that were ruthlessly suppressed. The Norman Conquest did not bring a huge number of French immigrants to England. Thus, a realistic number of French speakers stayed as low as five per cent. The Normans did not outnumber the English the way the Anglo-Saxons outnumbered the Britons when they had settled in the fifth century. At that time, England was mostly populated by peasants who lived from agriculture (cf. Blake, 1996: 107).

Except for a brief period after William's death, the kings of England were at the same time dukes of Normandy from 1066 until 1204. New English nobility had possession on both sides of the English Channel and William seemed to be more connected to his dukedom of Normandy than to his English kingdom. Eventually, he was buried in Normandy. As the ties between England and France were gaining strength, the ties between England and Scandinavia were all but terminated. The Scandinavian settlers had no connections to their mainland anymore, thus staying in and committing to England completely. They

were now totally integrated, the English culture being the only one they were exposed to (cf. Fisiak, 2005: 62-63).

Some interesting views on the impact of the Conquest we find in Barber (2000: 134):

> The Norman Conquest of 1066 was not such a violent break in English history as people sometimes imagine. There was already strong French influence in England before the Conquest, at any rate at the higher levels of society: Edward the Confessor was half Norman, and his court had close relations with France.

Interestingly enough, the new rulers of England, Normans, were of Scandinavian origin i.e. the Scandinavian Vikings settled in northern France having recognized the French crown. Thus, loosely, we can talk about the second Viking occupation of England! (cf. Barber, 2000: 134).

> People sometimes talk […] as though the Norman Conquest were the coming of a higher civilization to the backward and barbaric Anglo-Saxons. This, however, is a misapprehension. Six hundred years had passed since the Anglo-Saxon invasion of Britain, and in that time the English had developed a sophisticated civilization. The Normans demonstrated their superiority in military techniques, for they had the new heavy cavalry that had been developed on the continent by the Franks, while the Anglo-Saxons still fought on foot behind a wall of round shields. The Normans also showed themselves superior at the construction of castles, and after the Conquest they built some fine churches and cathedrals. But it is difficult to see in what other ways they were culturally superior to the people they conquered (Barber, 2000: 134-135).

The Anglo-Saxons excelled at literature, both poetry and prose, and were exceptionally good artists and craftsmen. It is believed that Charlemagne brought an Englishman to reform his educational system at the end of the eighth century. Their scholarship tradition dated back to the seventh century. Although the Anglo-Saxon tradition had been seriously interrupted by the Viking incursions, it was successfully revived by the West-Saxon leaders in the second half of the tenth century (cf. Barber, 2000: 135).

William's conquerors became the new ruling class by replacing the native aristocracy. Key replacements were made also in ecclesiastical positions i.e. bishoprics and abbacies having led to Norman domination in the field of education (cf. Barber, 2000: 135). The way this influenced the linguistic

situation is discussed thoroughly in the next chapters as it is of vast importance to this research.

3.2. Scandinavian influence

> PDE now has (in comparison with OE, and also some modern Western European languages) a very large lexicon. This development is largely the result of interaction with Norse, Latin and French, much of it during the ME period. Words inherited from OE form the bulk of the 'basic' vocabulary of PDE, though many OE words were lost during the ME period, frequently being fully replaced by loans, for example OE **earm** POOR. Some OE items are now only retained in dialects, for instance **attorc(r)op**, which has generally been replaced in PD standard usage by SPIDER but is still attested in the PDE dialect of Lancashire (Horobin & Smith, 2002: 71).

After the description of historical developments, the focus now turns to language. The mainstream handbooks and the widely accepted theories are considered as depicted by the scholars who dedicated their work to this topic. First, the situation in the OE period is observed.

It is believed that somewhere between 400 and 900 loanwords have survived into present-day English, another 600 being found only in the dialects.

> [A]mong these loans we find not only the expected share of technical vocabulary such as words for ships, money, legal institutions, warfare, etc. […] we also meet with numerous everyday nouns such as PDE *band, bank, birth, crook, dirt, dregs, egg, fellow*, or adjectives such as *odd, rotten, rugged, scant, seemly, sly, tattered, tight, weak*, and even numerous verbs, e.g. *call, cast, clip, crave, crawl, die, droop, gape, gasp, get, give, glitter, raise, rake, rid, scare, scowl* (Kastovsky, 1992: 320).

More importantly, Scandinavian influence does not include only lexical borrowing; there are numerous grammatical items that have been incorporated. Some examples we find in Kastovsky (1992: 320).

> [T]he spread of Northern *are* (vs. Southern *sindon*, pl. of *to be*, OE *beon*), as well as the *s*-suffix of the 3rd pers. sg. instead of original *-ð* (i.e. *he drifð > he drifes*) are also due to Scandinavian influence.

3.2.1. Old English period

> Old English is where the English language began. It is where English prose began. It is where one tributary of the great river of English poetry began. So its place in any university English syllabus ought to be assured (Mitchell, 1994: 180).

The number of Scandinavian loanwords incorporated in the OE period is rather small. Latin borrowings, with some 600 to 700 examples, present the majority of foreign influence. Borrowings from Celtic languages and French in this period do not play a significant role. During the OE period, the most prestigious dialect was West Saxon, and since the Scandinavian settlements did not reach that far, not many loans penetrated the lexicon of written English at that point. Naturally, we are talking about written language now, remembering the fact that the Scandinavian influence was mostly spoken, at least in the OE period. Apart from place-names, the first loans that entered the English language were related to semantic fields like ships, money, legal institutions, warfare etc. (cf. Burnley, 1992: 415).

> The earliest loans […] are of a more technical character, having to do chiefly with the sea and with legal customs; those adopted before about 1150 are partly of a similar character, though some more miscellaneous words occur (Serjeantson 1935: 63).

The following citations consist of examples of loanwords from this period and are also taken from Serjeantson (1935: 66-68):

> ***By*** 'a dwelling' (O.N. *bȳ-r*) […] M.E. has the word occasionally, e.g. in the *Cursor Mundi*: *siþen he come vntill a bij* 13290; it survives now only in the compound *by-law* = town-law, except in Place-Names, of which it is a common element in the north and east.
>
> ***Lagu*** 'LAW' (O.N.) *lǫg*, pl.) is one of the commonest Scandinavian loans in O.E., and one of the most important. It is used for a decree, enactment, for a code of laws or legal system, and for an area under a specific legal system *: he niwade þær Cnutes lage* (Chron. E 1064) 'he renewed the laws of Cnut'; *nu is seo ealde lagu geendod æfter Cristes tocyme* (Ælfric's Pastoral Epistles, 380) 'now is the old law ended after Crist's advent';
>
> ***Wrang*** 'WRONG' (O.Norwegian *vrang*) : *unrihtdeman, ðe wendaþ wrang to rihte and riht to wrange* (Wulfstan 203) 'unjust judges, who turn wrong to right and right to wrong'; also 'rough, uneven': *to ðam feorðan þorne on wrangan hylle* (*Codex Diplomaticus*, V, 297).

According to Kastovsky (1992: 320), "it is […] the intensity of the influence – but also its temporal deployment – that has to be explained". There are only approximately 150 Scandinavian loans in OE, whereas in ME, we discover thousands. When we know that the main settlement period is in the tenth century, it has to be explained why first appearances of loanwords in manuscripts date from the ME period. What is the reason for this time lag? To be brief, it is the extralinguistic situation in the OE that has made the borrowing possible, but the results only come to be visible in ME. The main reason for this is the dominance of the West Saxon standard dialect in the OE period and the lack of Scandinavian settlement in that area. More is said on this topic in the next chapter on the ME period (cf. Kastovsky, 1992: 320).

The aforementioned Treaty of Wedmore, in which the Danelaw is established, contains some of the first Scandinavian loanwords:

> [T]he items *healfmearc* 'half a mark' (adopting the Scandinavian monetary unit *mǫrk*) and *liesing* (in *heora liesengum* 'their freedmen') from ON *leysingiar* 'freedman' (Kastovsky, 1992: 321).

When we talk about the Danelaw, with a focus on linguistics, we talk about languages in contact. The sociolinguistic situation in this part of England under Danish law, as well as the subsequent developments, is crucial to one's understanding how the language borrowing takes place and why the impact on English has been that intense. Even though Vikings were invaders and their hostility towards the inhabitants is unquestionable, large groups of Norsemen settled peacefully in their new home (as we have already established in previous chapters) and started living side by side with the Anglo-Saxons. There were numerous instances of intermarriage (cf. Baugh & Cable, 1993: 93-94).

The extralinguistic data that we have about the Danelaw is disputed and cannot be established with certainty. Nevertheless, we have strong reasons to believe that the following is at least partly true:

1. fair amount of mutual intelligibility OR
2. relatively widespread bilingualism AND
3. a considerable period of coexistence of the two languages involved.

(cf. Kastovsky, 1992: 327-328)

We look briefly into these phenomena: Concerning the mutual intelligibility we find in Kastovsky (1992: 328) that

> [a] certain amount of mutual intelligibility probably existed, given that the Scandinavian and the OE dialects are part of the Germanic language family and that 'at the time of the early Scandinavian settlements in England the period of separation had only been slightly longer than between British and American English today, and the communities had been in touch with one another for much of the time' (Strang 1970: 282, quoted in Kastovsky 1992: 328).

Unfortunately, the degree of intelligibility is a matter of dispute, and for the lack of evidence it cannot be confirmed or denied. Barber (2000: 130), however, is straightforward that the two peoples understood each other:

> Old English and Old Norse were still reasonably similar, and Englishmen and Danes could probably understand each other, and pick up each other's language, without too much difficulty. […] There would be Englishmen speaking Old Norse, and Danes speaking Old English, and when they didn't know a word in the other language they would use a word from their own, perhaps giving it a pronunciation and inflections that they thought appropriate to the other language.

Further, Baugh & Cable (1993: 94) point out to a similarity between ON and an English dialect at the time:

> The Anglian dialect resembled the language of the Northmen in a number of particulars in which West Saxon showed divergence. The two may even have been mutually intelligible to a limited extent. Contemporary statements on the subject are conflicting, and it is difficult to arrive at a conviction. But whatever truth lies in this debatable question, there can be no doubt that the basis existed for an extensive interaction of the two languages upon each other, and this conclusion is amply borne out by the large number of Scandinavian elements subsequently found in English.

Serjeantson (1935: 62-63) concludes the following:

> [T]he Scandinavian dialects at this period had considerable resemblance to the English dialects, particularly in vocabulary; the speakers of both were to some extent mutually intelligible; thus words introduced from one to the other language would carry with them little of the feeling of foreign words. In some cases the corresponding words in the two languages were practically identical, and it is sometimes impossible to know whether a particular word […] is a loan-word or not.

Now we look into the bilingualism that is supposedly the reason why the core-vocabulary form words have been borrowed. According to Kastovsky (1992: 329), bilingualism must have been "the main vehicle for linguistic influence of the kind at issue here". All authors that contributed to this subject agree that some form of bilingualism spread among the mixed population. One of the main points of disagreement is whether the English, the Danes, or both became bilingual (cf. Kastovsky, 1992: 329). Here is what Kastovsky (1992: 329) further says on bilingualism in the Danelaw:

> What causes bilingualism? Usually the necessity to communicate effectively with members of two different, partly monolingual speech communities. One frequent, although not indispensible [sic] direct cause is […] intermarriage. [A]t the beginning the Danes came as invaders, as conquerors, and certainly were regarded as such by the English in the Danelaw. Consequently, the pressure to learn Scandinavian was greater for the English, than for the Scandinavians to learn English, although some Danes probably also tried to pick up some English, especially when they did not settle within larger Danish-speaking communities […] Intermarriage, which certainly was common enough, probably produced a lot of bilingualism in the second and any following generation.

Serjeantson (1935: 62) says that "[f]or some time the Danes must have been bilingual, and no doubt many of their English neighbours and fellow-villagers and townsmen learnt to speak Danish". Once again we find the thesis that intermarriage was widespread and the tendency to bilingualism was encouraged by it. On the same topic in the chapter on Scandinavian influence Baugh & Cable (1993: 94) state that

> [u]p until the time of the Norman Conquest the Scandinavian language in England was constantly being renewed by the steady stream of trade and conquest. […] In […] districts in which the prevailing speech was English there were doubtless many of the newcomers who continued to speak their own language at least as late as 1100 and a considerable number who were to a greater or lesser degree bilingual. The last-named circumstance is rendered more likely by the frequent intermarriage between the two peoples.

To move to the coexistence of OE and ON, we start by assuming a linguistic situation of *diglossia*. Before the Norman Conquest and the end of Danish reign in England, the social and cultural ties between the old and new home were strong; therefore we believe that it is highly likely that Danish was still actively

used in England. After 1066 a new language 'arrived' i.e. French and connections to Scandinavia were disrupted. Thus, Danish speakers were left in their new home, with no recent contact to their homeland, among the English-speaking population. It is easy to assume that they would gradually turn to English and slowly, after a few generations, cease to use the language of their fathers (Baugh & Cable, 1993: 94).

3.2.2. Middle English period

Before the presentation of Scandinavian influence on ME, the ME period itself is discussed briefly. This paper examines the Scandinavian loans in ME and, therefore, that seems like a logical step. Some general knowledge of the period is by all means of considerable help.

After the Norman invasion in 1066, the linguistic situation in England was rather peculiar. French was the language of the new rulers and there was no literary standard anymore. The West Saxon dialect, which was the standard in the OE period, had lost its importance. Following Fisiak (2005: 67), summary of the use of French and English towards the end of the twelfth century looks like this:

> a) *French* was spoken by the Norman upper and middle classes in everyday use, in law courts, in the army; it was used by some Englishmen under the same circumstances whenever interacting with Normans.
>
> b) *English* was basically the language spoken by the English population on all occasions; it was also used by the Norman middle classes and sporadically by members of the upper classes in interactions with the ethnically English population.
>
> To complete what has been said above one should indicate that, although French was the official language from the Conquest onwards, there is evidence that in 1116 a defendant in court testified in English and in 1198 a witness gave his testimony in English which was subsequently translated into French (Williams 1976 [sic][21] : 77). Furthermore, both French and English were used in church sermons, and around 1180 one of the famous abbots encouraged monks to preach in English (Fisiak, 2005: 67).

[21] Probably a misprint; Williams' *Origins of English language* was published in 1975 (cf. References and selected bibliography of this paper).

One topic of particular interest for this paper is about the evidence one has i.e. about the manuscripts one has at one's disposal. Now this is highly significant because a corpus study follows in the empirical part. As there was no printing at the time, the copying of manuscripts was done by scribes. They copied all that had survived from the period, thousands and thousands of texts which present the corpora nowadays – the only valuable evidence that exists for scientific purposes.

> For the OE and ME periods, the main sources of information are literary and documentary manuscripts written by medieval scribes, supplemented from the end of the period by early printed books. There are comparatively few manuscripts containing OE, but there are thousands of manuscripts surviving from the ME period. […] Clearly, historical linguists working with such materials cannot choose their informants for their social class or geographical setting, and those informants cannot be literally interrogated for further information; manuscripts survive for all sorts of reasons, and the scribes who wrote them are long dead (Horobin & Smith, 2002: 13-14).

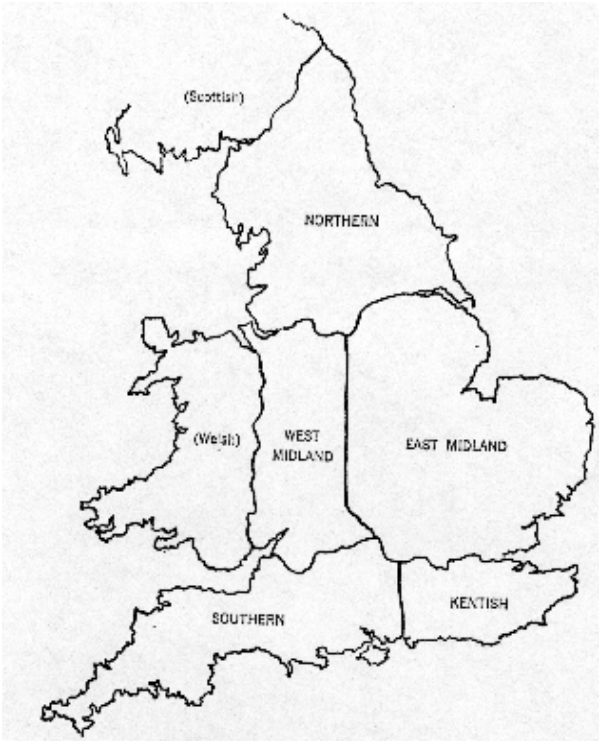
Having all this in mind, complex questions concerning transmission arise; e.g. did the scribes copy the texts exactly as they saw them, or did they meddle with them? If yes, to what extent? What happened when they could not understand what they copied? Did they try to change it? Moreover, it has to be noted that although the names of the scribes are identified, nothing about them or their social background is familiar (Horobin & Smith, 2002: 14).

In a linguistic situation like the ME one, where there was no literary standard, it did not last long until the scribes started changing things. There were a lot of discrepancies, and they did not have a standard as an example. Thus, it can be assumed that they changed things. This is valuable knowledge for someone studying those exact texts. To connect this to the research of this paper, one can wonder what the scribes from East Midlands, massively populated by Scandinavians, did with all the new language material that was around.

If the figure number 5 is compared with the figure number 3 (map of the Danelaw), it can be easily concluded that the territory of the East Midland dialect is the territory mostly populated by the Scandinavians. Much later, when Modern English was formed, this dialect played a key role. Mostly because

London belonged to this region, this dialect emerged as the official English. It is the part of England where the Scandinavians were heavily settled, the part of England whose dialect ended up creating the standard. Would this have happened all the same, if the scribes had a standard to look up to? Would the Scandinavian words have found their way to the English lexicon nonetheless?

Figure 5: The dialects of ME



As it is already mentioned, the incorporation of Scandinavian loanwords is characterized by its intensity and its specific temporal unfolding. In the OE period, only some hundred and fifty loans are recorded, whereas in the ME period, the number rises to a few thousand (cf. Burnley, 1992: 416). The fact that the emergence of loans is delayed is due to the fact that Scandinavian never was a literary language.

> Perhaps the most striking feature of the lexical legacy of Scandinavian is the extent to which its emergence into written English is delayed. The major period of population mixing is over before the Middle English period begins, yet although the evidence of close contact is apparent quite early in Middle English from influence on word formation, function words and syntax, relatively

> few Scandinavian lexical loans […] appear in Old English texts (Burnley, 1992: 418).

Interestingly, works like *The Ormulum*,[22] which originates from a region known for massive Scandinavian settlement, contains only about 120 loans in a text as long as 20,000 lines. The number of loans outside these areas is even lower: *Vices and Virtues*[23] from the southeast midland has only six whereas *Ancrene Riwle*[24] from the southwest has seventy-three. Moreover, over 1,150 words beginning with /sk/ can be found in the 19th century *English Dialect Dictionary*, majority being of Scandinavian origin (Burnley, 1992: 419).

> Contact between the two languages took place in the spoken mode, and largely with reference to questions of immediate interest only to the local community. Most Scandinavian terms were adopted into English at the level of everyday communication and were barred from written expression both by the existence of a standardised form of written English, the West Saxon *Schriftsprache*, which was the official administrative language of the Anglo-Saxon state (Burnley, 1992: 419).

At this point, it is useful to add that the ME period was quite an extraordinary one concerning the linguistic situation. English was in decline in standard-like functions and all institutions had French or Latin as their official languages. Because of the lack of a literary standard, variations at all levels of linguistic systems occurred and ME can be described as a "conglomeration of separately developed dialects" (Burnley, 1992: 411). Besides, we must not forget that historical records that we have on Scandinavian settlement and linguistic influence "are partial, biased and scanty" (Burnley, 1992: 416). Except for the number of loanwords in ME, the character of the same changed as well:

> […] the later (M.E.) adoptions have no such limitations, [25] and embrace even the most commonplace words, no introduction of new objects or ideas being implied (Serjeantson 1935: 63).

A complete list of various Scandinavian loans is not provided. Instead, an illustration of the effects of these loans is treated by using a few examples.

[22] For reference see Holt: 1878.
[23] For reference see Holthausen: 1888.
[24] For reference see Dobson: 1972.
[25] Limitations in incorporation of words due to their character.

Before the discussion of the examples, a few lines are dedicated to some general remarks on the incorporation of the loans.

The most common effects are certainly replacement or restriction of senses. As we have seen in the chapter on lexical integration, *borrowing* may result in *extension* or *narrowing* of meanings, or a foreign word may force its way into the language. The latter means that a native word disappears from use. For example, *anger*, derived from Scandinavian *angr* has replaced OE *torn* and *grama*. Other Scandinavian loans like *die, bark, wing and blom* are in competition with their ME equivalents; *die* with *sweltan* and *steorfan*, *bark* with *rind*, *wing* with *fether* and *blom* with *blostma* (cf. Burnley, 1992: 422). The incorporation of certain loans may provoke the appearance of the so-called doublets. That happens when a loanword and its cognate both remain in the recipient language for a while. The examples are *skirt/shirt*, *gate/yate*, *give/yive*, *sister/soster, kirk/church, kist/chest, hale/whole* etc. Eventually, one variant disappears or they both remain with slightly different meanings (e.g. present-day English *skirt*/*shirt*) (cf. Burnley, 1992: 422).

In the following part the focus is on a specific group of loanwords i.e. the ones that begin with /sk/. Particular interest is on the loanword *sky* and its equivalents in ME.[26] One of the most secure ways[27] to find words of Scandinavian origin in the English language is to look for words containing this initial cluster. As a beginning, an excerpt from an old but extensive study on the Scandinavian loanwords is presented. It is an excerpt from a study by Eric Björkman (1900: 120), *Scandinavian Loan-Words in Middle English*.

> O.E. initial sc- (as well as -sc-, -sc) appears in M.E. as a simple sound (š); this sound-change took place already in O.E., but how early is not quite settled, as we have few other proofs of this pronunciation than the M.E. spellings sh, sch (ss, s). When, therefore, sk- appears in M.E., it must be due to foreign influence from Celtic, Latin, Romance languages, Scandinavian. The main

[26] It is clear that a lot of information was simply left out from the introduction and general overview of the Scandinavian loans. This was partly done on purpose because the intention of going into too many details did not exist and the aim was to give some important information concerning the subject. However, in succession, along with the analysis and examples more will be said and some gaps will certainly be filled.
[27] See the following citation from Björkman.

> part of M.E. sk- is undoubtedly due to Scandinavian influence. […] the spelling in O.E. gives no guide to the discrimination of Scandinavian loan-words of this class from native ones, both being generally written with sc, which in late O.E. undoubtedly, as a rule, denoted a š-sound as is proved by the spelling scho 'she' in the *Peterborough Chronicle* (Sweet, H.E.S. p. 192) but also may have denoted sk in Scandinavian loan-words. The O.E. spelling is kept in several M.E. manuscripts; in these spelling sc offers no means of distinguishing native words from loan-words; only spellings with sk which occasionally occur, allow of a conclusion.

We have seen that some conclusions can be made, even though a trace of 'mystery' remains. The previous excerpt has argued that the word *sky*, which is a highly frequent word nowadays, is undoubtedly of Scandinavian origin because it has the initial /sk/. Now that the origin is unquestionable, the incorporation of the word *sky* is traced and its effects on the ME lexicon are identified. At this point, a presentation of an important study, written by Sibylle Hug, is incorporated. The title of the study is *Scandinavian loanwords and their equivalents in Middle English*. Based on an extensive research of quite a number of ME texts, Sibylle Hug examines Scandinavian loanwords, their occurrences and their interaction with the existing items of the West Germanic vocabulary.

She begins the analysis by giving various definitions of *sky* given by several dictionaries. As an example, only the one from the OED is presented, in order to make the explanations that follow more clearly.

> **OED** **Sky, n.1**
>
> **†1.** A cloud. *Obs*. […] **2. a. the skies**, the clouds (obs.); the upper region of the air; the heavens. *Chiefly poet*. […] **b.** Used without *the*, in limited sense. […] **3. a. the sky**, the apparent vault or arch of heaven, whether covered with cloud or clear and blue; the firmament […] **4.** *poet.* or *rhet.* **a.** the celestial regions; heaven; the heavenly power, the deity ("sky, n.1". *OED Online*. December 2012. Oxford University Press. 14 December 2012 http://oed.com/view/Entry/181136?rskey=igTQse&result=1).

Further in the discussion, Hug asserts that *sky* enters the ME lexicon in the 13th century and that its first occurrences refer to 'skies' rather than to 'clouds' as stated in the OED quotation. However, the meaning of ON *sky* is equivalent to the ME *cloud*. Hug then continues the presentation by listing a number of West

Germanic members of the same *lexical field* like ME *loft, heven, lift, wolcnen, clude, firmament* etc. Finally, a conclusion is provided:

> The semantic field of loft and sky has undergone many changes since the OE period. OE had only 4 words, which were more or less synonymous: OE heofon "the abode of God" and "natural heavens", OE lyft "cloud, air, sky", OE wolcen/welcen "cloud, sky" and the technical term OE rodor "firmament, sky". […] In ME times, semantic transformations take place and many new words appear: ME loft, heven and lift preserve the OE meanings, but ME wolcnen is mainly used for "sky". The result is a gap, which is filled both by Scandinavian sky – commonly applied to "the apparent vault of heaven" in the examined ME texts – and above all by ME clude/cloud. […] Both air and sky slowly supplant loft and lift in their respective meanings. The result of this tendency towards differentiation is the structure of this semantic field in ModE: both lift and loft are obsolete in the meanings "air, sky" and have been replaced by air and sky; heaven in the singular has specialized in the sense "abode of God", whereas in the plural it has preserved the meaning "sky"; cloud has ousted ME sky and wolcnen denoting "a visible mass of condensed watery vapur floating in the air" (Hug 1987: 369-370).

The relationships between the members of the word field are thoroughly examined and the present-day English situation is clear. The reason why this study is included is simple: its method is clear and straightforward and the research that follows is conducted along the similar lines.

In the empirical part of the paper, it remains to be seen whether similar things happened in connection with other widely recognized Scandinavian loanwords. It appears like a 'fairy-tale' explanation if one looks only at examples like *die*, *take* or *sky*. These examples make an interesting read, certainly well-suited for a school syllabus. Should any conclusions be drawn based only on these handpicked items? If the numerous other examples are taken into account, the ones for which Scandinavian origin is highly questionable, the ones that are listed under 'probably of Scandinavian origin', perhaps it could only be concluded that there is not enough evidence to claim anything. The data at one's disposal is scarce and old, both languages are also highly similar, and perhaps there is no way to confirm any of the theories. Loanwords from Latin, Greek, or French are much easier to identify than words borrowed from

Scandinavian. With the Scandinavian influence, there is a much harder task in front of anyone who attempts to shed some light on the subject.

4. The research tools

4. 1. Corpus[28]

In this chapter, some general information is provided on the 'tools' used for this research. This includes a short description of the corpus and a brief introduction to the computer program in order to make the findings as easy as possible to apprehend.

The *PPCME2* or the second edition of the *Penn-Helsinki Parsed Corpus of Middle English* text samples is based largely on the Middle English section of the Diachronic Part of the Helsinki Corpus of English Texts. The following table (see Table Nr. 2) shows the main time periods as they appear in the corpus file names, labeled M1 to M4, each period covering approximately a hundred years. It includes a total of about 1.2 million words and comprises 55 text samples. There is also a file with philological and bibliographical information about the texts.

Table 2: Helsinki periods

Period designation	Composition date	Manuscript date
MX1	unknown	1150-1250
M1	1150-1250	1150-1250
M2	1250-1350	1250-1350
M23	1250-1350	1350-1420
M24	1250-1350	1420-1500
M3	1350-1420	1350-1420
M34	1350-1420	1420-1500
MX4	unknown	1420-1500
M4	1420-1500	1420-1500

Apart from by date, the texts are also classified by name, dialect and genre. The texts are claimed to belong to one of the following five ME dialects:[29]

1. East Midland
2. West Midland

[28] The information about the corpus incl. table number 2 is taken from Kroch & Taylor (2000: s.v. corpus description).
[29] See Figure 5.

3. Northern
4. Southern
5. Kentish

The data is annotated and prepared for being browsed by a concordance program. When an item is looked up, all the vital information can be found immediately. It has to be noted that the preparation of the corpus makes the research and the analysis of the data uncomplicated.

Nevertheless, there is a minor setback to the corpus being annotated i.e. each word being marked for a particular part of speech. Even though it certainly helps with the search for a right word, it makes the ME texts even more difficult to read than they already are. This causes some problems, as in order to look for a right word, one has to understand in which contexts this word appears.

4. 2. The concordance program[30]

The concordance program used for the research is the freeware program called *AntConc*. It contains seven tools that are easy to access:

1. **Concordance Tool**: shows how words and phrases are used in a corpus of texts.
2. **Concordance Plot Tool**: shows search results as a 'barcode' format; the position where search results appear in target texts is highlighted.
3. **File View Tool**: shows the text of individual files; the results generated in other tools can be investigated in more detail.
4. **Clusters (N-Grams)**: clusters based on the search condition are shown and the results generated in the Concordance Tool are summarized. The N-Grams Tool searches the whole corpus for 'N' (e.g. 1 word, 2 words…) length clusters; common expressions in a corpus can be found this way.

[30] The features of *Antconc* are summarised from the *Antlab*, the homepage of the program founder Lawrence Anthony (Cf. references and selected bibliography).

5. **Collocates**: with this tool, non-sequential patterns in language can be investigated.
6. **Word List**: all the words in the corpus are counted and presented in an ordered list; this makes the most frequent words in a corpus easily found.
7. **Keyword List**: in the corpus, words that are unusually frequent (or infrequent) are shown in comparison with the words in a reference corpus; characteristic words in a corpus can be identified this way.

A clearer picture of the way the program operates is given once the first examples from the research are presented. The other tools, such as the OED, MED and the Historical Thesaurus do not need specific explanation.

5. The corpus analysis of the word pairs

A few remarks need to be made before the analysis of the word pairs. This chapter also presents all word pairs in the order they are examined, Scandinavian vs. OE word pairs being discussed first. Furthermore, the selection of word pairs needs some clarification.

First of all, here are all the word pairs selected for the research. They are presented in the following table:

Table 2: The word pairs

Scandinavian vs. OE word pairs	OE vs. OE word pairs
anger vs. grame (vs. wrath)	*wood* vs. *holt*
lift vs. heave	*town* vs. *borough*
law vs. †e	*food* vs. *meat*
die vs. starve	*neck* vs. *halse/hals*
call vs. †clepe	*speak* vs. *†mele*
take vs. nim	*sorrow* vs. *woe*
shirt vs. skirt	*dog* vs. *hound*
bloom vs. blossom	*black* vs. *swart*
sky vs. heaven	*fowl* vs. *bird*
ill vs. sick	*tree* vs. *beam*
fellow vs. †yfere	*sea* vs *†brim*
*egg vs. *ei*	*ring* vs. *bee*
wing vs. feather	*quell* vs. *slay*
scare vs. fright	*many* vs. *†fele*
stern/starn vs. star	*cut* vs. *carve*

In the following research, all words are referred to according to their OED entries. A word that is preceded by '*†*' marks a word that is today obsolete, whereas a word with a symbol '***' presents a word without an OED entry. The

only word without such an entry is the OE equivalent of the Scandinavian loanword *egg*, which is referred to according to its MED entry.

As it was briefly mentioned in the introduction, the word pairs are chosen with the help of several linguistic handbooks,[31] the MED and the Historical Thesaurus (HTE). Scandinavian loanwords are selected from lists of such words found in linguistic handbooks and then paired with their ME equivalents i.e. with their ME near synonyms. The idea is to have two words denoting (almost) the same in ME or in OE, and to examine what has occurred with their meaning since then. To achieve this, I use the Historical Thesaurus to look for near synonyms and then, in the MED (and the OED), I check whether these words actually existed in the ME period. If they did, I search the MED for their meaning.

For the OE vs. OE word pairs, the process of word selection proves to be slightly more difficult. Since there are no 'lists of words' as in the case of Scandinavian loans, I attempt to find two native words[32] that were used in the OE or the ME period by using the Historical Thesaurus. I often use Modern High German words to look for OE words that are not so familiar in present-day English.[33]

In both cases, I look for of words that shared the same meaning, and for which it can be assumed that were 'in rivalry for a spot in their respective word field'. The only difference between the two lists of word pairs is that one list contains word pairs with a Scandinavian loanword. Apart from looking how the Scandinavian words establish themselves in the new environment and interact with their equivalents, I intend to examine the patterns that occur both in the Scandinavian vs. OE and the OE vs. OE rivalries.

It is essential to point out that the selection of Scandinavian loanwords is to some extent biased. By selecting them from linguistic handbooks that handle

[31] In case of SC vs. OE word pairs the handbooks used are those covering the Scandinavian lexical influence that provided lists of Scandinavian loanwords e.g. cf. section 3 of this paper.
[32] Two near synonyms that will make one word pair.
[33] This happens to be very interesting from the perspective of a German speaker. It is astonishing how many widely used present-day German words used to be similarly well-established in the OE period.

mostly Scandinavian loans that have survived into the present-day English, the outcome of the research proves to be predictable in some degree. There are certainly Scandinavian words from the ME period that have not survived, but were part of the English lexicon once. It could be interesting to include some of these words in the research and see whether it can be discovered why they have not remained in the English lexicon as the other examples have. It is not an easy task at all to find them, since linguists normally occupy themselves with words that have 'survived' i.e. 'remained' in the English lexicon.

All in all, the above mentioned thirty word pairs have been selected for research on the condition that each pair consists of two near synonyms and that in case of fifteen word pairs – one word is of Scandinavian origin. Furthermore, not all sources provide the same interpretation of the 'alleged' loans. Very often, a word can be highlighted as a Scandinavian loan in one and not mentioned in other linguistic handbook. The dictionaries often provide different etymologies from the other sources. This is in (small) part the reason for this research in the first place.

5. 1. SC vs. OE word pairs

5. 1. 1. *Anger* vs. *grame* (vs. *wrath*)

Another native word has been added to this pair i.e. *wrath* because it frequently appears in the concordance. More significantly, it appears often in phrases with the other two researched items. It is included in the research due to its 'special' utilisation, which is discussed along with the 'original' word pair.

Definition and etymologies:[34]

- *anger,* n.*:* the first appearance in ME is recorded in the 14th century; it is derived from ON *angr*, meaning 'trouble, affliction'; apart from some obsolete, literary and dialectal meanings, the one that survived up to

[34] The *OED online* was accessed between 14th and 16th December 2012. The exact date for each word will be omitted from the citations to avoid unnecessary repetition. The OED is fully cited in the section 'References and selected bibliography'.

today is under number 2 of the dictionary entry (cf. "anger, n.". *OED Online*. http://oed.com/view/Entry/7498?rskey=CXIsBS&result=1):

> "The active feeling provoked against the agent; passion, rage; wrath, ire, hot displeasure".

- *grame,* n.: derived from OE *grama*, has survived only as an obsolete and exclusively archaic form; the first meaning of the OED entry (cf. "grame, n.". *OED Online*. http://oed.com/view/Entry/80552?rskey=P3QRjo&result=1):

  > "Anger, wrath, ire. *Obs.*"

- *wrath,* n.: derived from OE *wræððu*; it denotes 'vehement or violent anger; 'intense exasperation or resentment'; 'deep indignation'; its meaning is often in connection with God, e.g. the fixed phrase: *wrath of God* (cf. "wrath, n.". *OED Online*. http://oed.com/view/Entry/230555?rskey=jNhcHH&result=1).

After running concordances with all three words, the following can be established:

Results of the corpus analysis:

1. Frequency: There are 23 instances of *anger*, 19 instances of *grame* and 41 tokens of *wrath* in the corpus.
2. Period: All but one token of *grame* are from the earliest period of ME (M1); *anger* appears only in the latter stages whilst *wrath* is recorded throughout all ME periods. It can be pointed out that in the later stages, *wrath* often appears in the phrase 'wrath of God'.
3. Dialect: Most tokens of *anger* are found in the East Midland dialect, with some tokens from the West Midland and Northern dialects; there are no instances from the south; almost all tokens of *grame* are found in the West Midlands and *wrath* is recorded in all dialects except in the Northern dialect.
4. Genre: No significant remarks can be drawn here; the tokens from all three items are found equally dispersed among various genres.

Interpretation:

The Scandinavian loanword *anger* enters the English lexicon in the ME period and the first written record dates from the 14th century. It is widely assumed that its Scandinavian origin is certain due to the fact that it has not been discovered in any other Teutonic language (cf. Björkman, 1902: 200). From the gathered data it can be summarised that the native near synonym *grame* appears only at the beginning and *anger* towards the end of the ME period. On the other hand, the OE *wrath* can be seen throughout the whole period. Taking geographical distribution into account, *anger* appears mostly in the north and the east parts of the country where the Scandinavian settlements are the heaviest. *Grame* appears in the West Midland dialect almost exclusively and does not occur in the north.

It can be concluded that the appearance of *anger* changes the situation in this particular word field. The native near synonym *grame* is now obsolete and its usage exclusively archaic. *Wrath* remains in the lexicon up to today, only with a more 'specialised' meaning. It is interesting to note that both *anger* and *wrath* occur frequently in the East Midland dialect, which is crucial in the formation of the Standard English later on. It is important to note that French loanwords *ire* and *rage* have also contributed to the changes of this word field.

5. 1. 2. *Lift* vs. *heave*

This is an example of a Scandinavian loanword paired with a native word whose general sense appears to have been 'marginalised' to *archaic* and *dialectal* usage.

Definition and etymologies:

- *lift*, v.: derived from ON *lypta* (Old Norse *lopt* = 'air', 'sky'), its cognate being the modern German *lüften*; the etymological sense is 'to move up into the air'; the first entry from the OED concerning its meaning is the

following (cf. "lift, v.". *OED Online*. http://oed.com/view/Entry/108138?rskey=ba34P4&result=4):

> "To raise into the air from the ground, or to a higher position; to elevate, heave, hoist".

- *heave*, v.: derived from OE *hębban (hęfþ), hóf, hafen (hæfen)* and is a common Germanic strong verb, the modern German *heben* being its cognate. Here is the most important data from the OED entry concerning the signification:

  I. Transitive senses.
  1. To lift, raise, bear up. (Often with *up*.)
  a. Formerly in general sense; now only *arch.* Or *dial.* […]
  b. In modern use: To lift with exertion (something heavy); to raise with effort or force; to hoist (cf. "heave, v.". *OED Online*. http://oed.com/view/Entry/85201?rskey=sgeQsh&result=2).

Results of the corpus analysis:

1. Frequency: There are 27 instances of *lift* and 29 tokens of *heave* in the corpus.
2. Period: 18 out of 29 instances of *heave* appear in the earliest (M1) period of ME while 18 out of 27 instances of *lift* are from the second part of the ME period (M3 and M4).
3. Dialect**:** All but three tokens of *lift* are from the East Midland dialect while *heave* mostly appears in the West Midland variety. Apart from the West Midland, there are several tokens of *heave* from East Midland, 3 from Southern and 1 from Northern dialect of ME.
4. Genre**:** As well as in the case of *anger vs. grame vs. wrath*, it can be concluded that the text classification according to genre yields no interpretable information. In case of both words, most texts are of a religious character, which can be expected due to the majority of the texts in the corpus being of this genre.

Interpretation**:**

The majority of texts from the corpus date from the second part of the ME period. Therefore, the fact that the most appearances of *heave* can be recorded in the earliest period of ME shows that a significant decline in its distribution happens towards the end of that period. On the other hand, *lift* is almost undetectable at the very beginning, its spread being achieved in the later stages.

Concerning the dialectal distribution, *lift* appears in all but three instances in the East Midland dialect that is the ME dialect with massive Scandinavian settlement. It can be tentatively concluded that the introduction of *lift* from ON has gradually suppressed *heave* to its modern *dialectal* and *archaic* usage.

5. 1. 3. *Law* vs. *ƥe*

Although *law* is characterized as a late OE addition to the English lexicon, it is included in the research because it presents one of the most notable Scandinavian loanwords.

Definition and etymologies:

- *law*, n.1: derived from the prehistoric ON **lagu*, in Old Icelandic it has the meaning 'something fixed' in singular while as a plural it denotes 'law'. In late OE it is introduced as a singular noun. (According to the MED (cf. "laue (n.)". *MED Online*. http://quod.lib.umich.edu/cgi/m/mec/med-idx?type=id&id=MED24815, 15 December 2012), in ME the singular and plural forms seem to have the same meaning). Further explanation is in the following excerpt from the OED:

  > **I.** A rule of conduct imposed by authority. […]
  > **1.a.** The body of rules, whether proceeding from formal enactment or from custom, which a particular state or community recognizes as binding on its members or subjects. (In this sense usually *the law*.) †Also, in early use, a code or system of rules of this kind. [As the word was in Scandinavian a plural, though adopted in Old English as a singular, this collective sense is etymologically prior to that of

‘specific enactment’ ("law, n.1". *OED Online*. http://oed.com/view /Entry/106405?rskey=kZhGJC&result=1).

- *†e*, n.2: this word appears in West Germanic languages rather differently and is derived from the OE *æ,* its cognate being the modern German word *die Ehe*. The following explanation of the connection between *lagu* and *†e* can be found in the long etymological excerpt from the OED:

  > In Old English in early use this was the general word for ‘law’ (both secular and divine); however, from the second half of the 10th cent. onwards, in the face of competition from the Scandinavian borrowing *lagu* […], it is increasingly restricted to the sense ‘divine law’. By the middle of the 13th cent. entirely superseded even in this sense […] ("† e, n.2". *OED Online*. http://oed.com/view/Entry/3068?rskey=8XWow1&result=4).

Results of the corpus analysis:

1. Frequency: There are 44 tokens of *law* and 12 instances of *†e* localised in the corpus.
2. Period: Both words are almost exclusively found in the earliest period of ME (M1); there are only 3 instances of *law* from M2.
3. Dialect: Even though most of the *law* tokens are from the East Midland dialect, several examples from West Midland and Kentish dialects are found. Most of the instances of *†e* are found in the West Midland dialect of the ME period.
4. Genre: *†E* appears mostly in religious texts (homilies), whereas *law* can also be found in historical writings.

Interpretation:

The findings in the corpus are, to a greater or lesser extent, in accordance with the theory from the OED. As an inclusion from the late OE, *law* already displaces its native equivalent *†e* and limits its meaning to ‘divine law’. This can be corroborated with the fact that there are only 12 instances of *†e*, mostly in religious writings and often in collocation with God. The fact that *law* is mostly spread in the East Midland dialect supports the theory of its origin. The only surprise is the absence of *law* examples from the later stages of ME.

5. 1. 4. *Die* vs. *starve*

The next two words to be analysed present a typical example of a native word changing its meaning due to an introduction of a foreign one. Although it is a theory accepted by various scholars,[35] this notion is tested in the research.

Definition and etymologies:

- *die*, v.1: derived from ON *deyja*; in OE the modern sense of the word is expressed by *steorfan, sweltan*, or the periphrastic *weasan dead*. It is generally believed that the word is lost early in the OE period and afterwards readmitted either in late OE or early ME from ON. However, other theories hold that the word is dialectally preserved in OE and then spread throughout the country in ME (cf. "die, v.1". *OED Online*. http://oed.com/view/Entry/52392?rskey=P6mQCS&result=3).
- *starve*, v.: derived from OE *steorfan* and a common West Germanic verb, its cognate being the modern German word *sterben*. The obsolete meaning it once expressed is quoted from the OED to show that the two words were once near synonyms:

  > **1.** To die. Said of a person or animal. In late use app. to die a lingering death, as from hunger, cold, grief, or slow disease. Also, in spiritual sense, of the soul. *Obs.* ("starve, v.". *OED Online*. http://oed.com/view/Entry/189210?rskey=bkCq3i&result=2).

Results of the corpus analysis:

1. Frequency: There is a vast difference in word frequency of the two words with *die* appearing 102 times compared to 11 instances of *starve*.
2. Period: 96 out of 102 tokens of *die* appear in the second period of ME (M3 and M4), though there are 3 instances from the earliest period as well. On the contrary, there are no tokens of *starve* recorded in the last quarter of the ME period. The rest of the tokens are equally spread over the first three quarters of ME.

[35] E.g. cf. Kastovsky (1992: 320), Baugh & Cable (1993: 98) etc.

3. Dialect: The observation concerning dialectal distribution seems to be quite straightforward: 99 out of 102 tokens of *die* are from the East Midland dialect. On the other hand, *starve* is located in three out of four ME dialects. The only dialect where no tokens are found is the Southern dialect.
4. Genre: Concerning genre, vast majority of texts including *die* are of historical character. *Starve* shows involvement in various genres with only 11 examples to be allocated.

Interpretation:

The number of tokens of *die* in the corpus as well as its geographical distribution show that *die* probably is a loanword from ON and that during the ME period it gradually ousts its native equivalent *starve*. As a consequence, the meaning of *starve specialises*. In the following example (see example 2), it is obvious that *starve* denotes 'to die'. As it is often used in an expression *starve of hunger*, it later begins to mean the following according to the OED: "[…] to perish or be in process of perishing from lack or insufficiency of food […] in colloquial use: To be extremely hungry" ("starve, v.". *OED Online*. http://oed.com/view/Entry/189210?rskey=bkCq3i&result=2).

2. +te_C nan_Q ne_NEG heafde_HVD **st+arf**_VBD **of**_P **hungor**_N.

Although there are theories that *die* is not a Scandinavian loanword but an OE derivation that was 'hidden' in a dialect and later reintroduced in the ME period (cf. "die, v.1". *OED Online*. http://oed.com/view/Entry/52392?rskey=P6mQCS& result=3), the results from the corpus show that theories of its ON origin could be qualified as more than plausible. The changes of meaning i.e. the *specialisation* of the meaning of *starve* can also be verified.

To conclude, the Scandinavian loanword *die* enters the English lexicon and establishes itself as a general term to signify 'to die'; the native word *starve* is forced out of its 'slot' and its meaning has *narrowed* or *specialised* to 'to die of hunger'.

5. 1. 5. *Call* vs. *†clepe*

Definition and etymologies:

- *call*, v.: northern, derived from ON *kalla* 'to call, cry, shout' etc. and is a common Germanic verb (cf. "call, v.". *OED Online*. http://oed.com/view/Entry/26411?rskey=qgHzTO&result=2).
- *†clepe*, v.: derived from OE *clipian* but the ME *clepe* originates from the OE form *cleopian*. The following citation is the first sense under the OED entry: "Obs. (or arch.) […] To cry, call; to call on, appeal to (a person), for or after (a thing). Obs." (cf. "†clepe, v.". *OED Online*. http://oed.com/view/Entry/34174?rskey=qudIBs&result=2).

The loanword *call* is another example of a word with an 'unquestionable' Scandinavian origin. To support this claim, Björkman (1902: 214-215) presents the following evidence:

> [*K*] is no test of loan, […] but in Kentish and other southern dialects we should, if the word had occurred there in O.E. as a native word, have to expect the form **challen*, as is proved by Kent. *chalf, chald, chalk* and by the analogy of M.E. *ȝalle* 'bile' […]. The word was originally northern, which fact points to Scand. Origin. The O.E. spelling *ceallian* (Byrhtn.) is due to the W. Sax. orthography and does not prove the existence of a native "broken" form, which would have given M.E. *challen*. O.E. *–calla* in the compound *hilde-calla* 'warherald' Exod. is presumably a native word.

Before the results of the research are presented, an excerpt from a similar research by Rynell (1948: 318) is quoted for comparison:

> In EM *calle(n*) is the commoner verb in most texts and is even the only verb in a few texts (Hav, JG), while *clepen* prevails in one text, a dictionary (PP), and stands alone in one (O). In N *call(e)* is the only verb in most texts, and only in one text (CM) does *clep(e)* occur more than sporadically, as is otherwise the case (YP, MA). In NWM and CWM *calle* is far more frequent than *clepe*, while in SWM *cle(o)pie(n), clupien* is by far the commoner verb and is even the only verb in most texts. S has *cle(o)p(i)e(n), clup(i)e* alone, except in a late London text (CT), in which, however, *clepe(n)* occurs twice as often as *calle(n)*.

Results of the corpus analysis:

1. Frequency: there are 395 tokens of *call* and 553 instances of *†clepe* in the corpus.
2. Period: only 17 out of 395 examples of *call* are from the first half of the ME period – in case of *†clepe*, in the same period there are 84 tokens localized.
3. Dialect: almost 500 tokens of *†clepe* are from the East Midland dialect of ME whereas almost 300 tokens of *call* are of West Midland origin.
4. Genre: there are no specific remarks that can be made concerning the genre classification.

Interpretation:

The case of *call vs. †clepe* presents another example of a Scandinavian loanword superseding its native equivalent. Although it is not unequivocally discernible from the corpus analysis, the clear dictionary data and evidence from other sources appear to instruct so. The reason for this situation might be that the disappearance of *†clepe* occurs later on, past the ME period. That might be the reason why it is so heavily present in the corpus, yet nowadays obsolete.

5. 1. 6. *Take* vs. *nim*

The next pair consists of a common and frequently used verb *take* and its (today) obsolete equivalent *nim* (cf. Modern High German *nehmen*).

Definition and etymologies:

- *take*, v.: derived from ON *taka*; even though it might have been used in the Danelaw around 1000 AD, its first occurrence dates from around 1100 AD.

> In Middle English it gradually superseded the Old English *niman* […], and has been, during the later Middle English and the whole modern English period, the simplest and most direct word for the general

> notion expressed by […] German *nehmen* […] (cf. "take, v.". *OED Online*. http://oed.com/view/Entry/197158?rskey=sqE1ZX&result=3).

- *nim*, v.: derived from an Indo-European base and, as already mentioned, is cognate with the Modern High German verb *nehmen*.

> In most of its applications *nim* corresponds to various senses of *take v.* (a Scandinavian loan, which was ultimately to replace it in all senses), although *nim* remained in common use down to the 15th cent. During the 16th cent. there are few traces of it, but immediately after 1600 it reappears […] (cf. "nim, v.". *OED Online*. http://oed.com /view/Entry/127135?rskey=gqgrDq&result =3).

Results of the corpus analysis:

1. Frequency: 1892 tokens of *take* are found as opposed to 273 instances of *nim*.
2. Period: 260 out of 273 instances of *nim* appear in the first half of the ME period (M1 and M2) whereas 1715 out of 1892 tokens of *take* can be found in the second half of the ME period (M3 & M4). It has to be pointed out that the majority of texts are from the second half of ME.
3. Dialect: 185 tokens of *nim* are from the West Midland and Kentish dialectal regions, the rest being from East Midland. *Take* is present in all four dialects, the majority of tokens belonging to the Midland dialects.
4. Genre: 220 tokens of *nim* come from a homily or a religious treatise whereas *take* can be found in all genres almost equally spread.

Interpretation:

As it is already mentioned in the OED (cf. "take, v.". *OED Online*. http://oed.com/view/Entry/197158?rskey=sqE1ZX&result=3), the Scandinavian loanword *take* enters the English lexicon at the very beginning of the ME period and gradually assumes the meaning from the native counterpart *nim*. In the ME period, according to Björkman (1902: 222), the word *take* rather early displaces its native counterpart in the Northern dialect. The results of the corpus analysis clearly show a sharp decline in the frequency of *nim*, especially in the later stages of ME. Its almost exclusive appearance in religious texts shows a certain *narrowing* in meaning. This is another case of a Scandinavian loanword

suppressing its native equivalent and becoming the well-established item for a common notion.

5. 1. 7. *Shirt* vs. *skirt*

This pair has an obscure history of sense as their etymologies seem intertwined. Both words are also highly similar in form.

Definition and etymologies:

- *shirt*, n.: derived from OE *scyrte,* its meaning from this period being obscure. The sense present in all Germanic languages includes 'short garment'. The initial <sh> points to a sound-change from the OE period, which is why it can be concluded that *shirt* is a native word. In the OED there is the following description of its meaning.

  > An undergarment for the upper part of the body made of linen, calico, flannel, silk, or other washable material. Originally always worn next to the skin […] now sometimes an undershirt or 'vest' is worn beneath it. Formerly a garment common to both sexes […] but now an article of male attire […] with long sleeves […] (cf. "shirt, n.". *OED Online*. http://oed.com/view/Entry/178316?rskey=gS5yEE&result=1).

- *skirt*, n.: derived from ON *skyrta;* as opposed to *shirt*, the initial <sk> points to its Scandinavian origin. The development of its meaning is controversial and there is the "unexplained difference of sense" (cf. "skirt, n.". *OED Online*. http://oed.com/view/Entry/181021?rskey=T2h5tP&result=1) between *shirt* and *skirt*.

Results of the corpus analysis:

1. Frequency: There are no examples of *skirt* in the corpus with *shirt* being localised 'only' 8 times.
2. Period: All but one token of *shirt* appear in the last section of ME (M4).
3. Dialect: There are six instances discovered in the East Midland and two from the West Midland dialect.

4. Genre: Although there are only a few localised instances, they differ considerably in genre. No particular remarks can be made.

Interpretation:

Lack of tokens discovered in the corpus limits further discussion. It is a great surprise that *skirt* does not appear even once in the corpus, despite being quoted both in the OED and MED. From these results, a strong influence from the Scandinavian cannot be implied. Similarly, a 'mere' 8 tokens of *shirt* offer no grounds for a detailed analysis. It could be argued that the prevailing religious nature of the corpus texts might be the reason for such results.

5. 1. 8. *Bloom* vs. *blossom*

The next pair consists of two words similar in form, which makes it difficult to tell whether it actually is the case of Scandinavian influence.

Definition and etymologies:

- *bloom*, n.1: derived from ON *blom* meaning 'a flower, bloom, blossom', its cognate being the modern German word *die Blume* (cf. "bloom, n.1". *OED Online*. http://oed.com/view/Entry/20454?rskey=g0UC9x&result=1).
- *blossom*, n.: derived from OE *blostm*, it is the OE word with the meaning 'flower' before the adoption of the ON *blom* (cf. "blossom, n.". *OED Online*. http://oed.com/view/Entry/20481?rskey=PLGQbC&result =1).

Results of the corpus analysis:

1. Frequency: There are 17 tokens of *blossom,* as opposed to none from *bloom*.
2. Period: All instances of *blossom* are from the first quarter of the ME period (M1).
3. Dialect: East and West Midland dialects are where the examples are found: 12 from East and 5 from West Midland.

4. Genre: 15 out of 17 tokens of *blossom* are from the texts of a religious character.

Interpretation:

In case of *bloom*, Björkman (1902: 204-205) claims that "the local distribution of the word points clearly to its Scandinavian source". Therefore, the fact that no instances of *bloom* are found in the corpus comes as a big surprise. The reason may be that it appears in the texts that are not included in the corpus and that the OED recording of *bloom* from *The Ormulum* is questionable. However, it is clearly pointed out in the OED (cf. "bloom, n.1". *OED Online*. http://oed.com/view/Entry/20454?rskey=g0UC9x&result=1) that an adoption from the Scandinavian *bloom* replaces the native *blossom* in the sense of 'flower'. This cannot be corroborated from the corpus analysis results and no conclusive explanation can be offered to explain this. There is a doubt that the incorporation of *bloom* is noticeable only in the texts outside the corpus or maybe appears later, as in case of *sky*.[36] Other possible reason might involve the incorporation of the French loanword *flower*.

5. 1. 9. *Sky* vs. *heaven*

As it was already mentioned in the theoretical part,[37] the initial /sk/- seems to indicate Scandinavian origin almost certainly. In his *Anglo-Norse Studies*, Per Thorson (1936: 2) concludes that

> [i]nitial *sk* is normally one of the most reliable criteria of the Scand. parentage of a word, provided it be of Germanic stock. Words in *scr*- form an exception, as in this group [sk] may often be native. They therefore need additional evidence before they can be classed as borrowings.

[36] See *sky vs. heaven.*
[37] See pages 40-41.

Definition and etymologies:

- *heaven*, n.: derived from OE *heofon*, its etymology being "uncertain and disputed" (cf. "heaven, n.". *OED Online*. December 2012. http://oed.com /view/Entry/85205?rskey=bBoueU&result=1). Here is the meaning of *heaven* from the OED.

  > The expanse in which the sun, moon, and stars are seen, (esp. in earlier use) regarded as having the appearance of a vast vault arched over the earth; the sky, the firmament (cf. "heaven, n.". *OED Online*. http://oed.com/view/Entry/ 85205?rskey=bBoueU&result=1).

- *sky*, n.1: derived from ON *sky* meaning 'cloud', its connection to OE *sceo* is disputed. The meaning in the OED is quoted here:

  > †**1.** A cloud. *Obs.* **2.a.** ***the skies***, the clouds (*obs.*); the upper region of the air; the heavens. Chiefly *poet.***3.a.** ***the sky***, the apparent arch or vault of heaven, whether covered with cloud or clear and blue (cf. "sky, n.1". *OED Online*. http://oed.com/view/Entry/181136?rskey= J3njBs&result=1).

Results of the corpus analysis:

1. Frequency: There are merely 2 instances of *sky,* as opposed to 95 tokens of *heaven*.
2. Period: The only 2 examples of *sky* are from the last quarter of the ME period – only 4 tokens of *heaven* are from this segment.
3. Dialect: 55 out of 95 instances of *heaven* are from the Northern dialect, the other examples being from the East and West Midland and the Southern dialect.
4. Genre: Apart from several appearances of *heaven* in historical texts, almost all other examples are from religious texts – especially the ones towards the end of the ME period. Both *sky* tokens are from a romance.

Interpretation:

The lack of tokens of *sky* is highly surprising as it is a common English word used in a wide variety of situations and an often cited Scandinavian loan.[38] A reason for this might be its late incorporation into the English lexicon. In the

[38]E.g. cf. Kastovsky (1992: 332), Baugh & Cable (1993: 95) etc.

OED there is an early quotation of *sky* from *Cursor Mundi*,[39] a ME text that is not included in the corpus of this research. Even though there are only two examples of *sky* to be analysed, some conclusions can be drawn from analysing *heaven*.

The majority of *heaven* tokens are from the texts of a religious character, which points to a *specialisation* in meaning and usage. Although there are not enough tokens of *sky* for a proper analysis, the tokens of *heaven* show that their meaning gradually changes from the general notion 'sky' to a specific religious concept as in the phrase *kingdom of heaven* (See example Nr. 3). Note that all examples are from the last quarter of the ME period (M4).

5. 1. 10. *Ill* vs. *sick*

Although these two words appear as both adjectives and nouns, only the former is discussed. Since a word can be looked up as a specific part of speech in the corpus, this seems like a less complicated task without any unnecessary confusion.

Definition and etymologies:

- *ill*, adj.: derived from the ON *illr* with the sense 'ill, bad wicked, difficult' in the early ME period. It is a contracted form of *evil* and its cognate is the Anglo-Saxon *yfel*, which in the ME becomes *euel* (*The Concise Dictionary of English Etymology*, s.v. *evil*). On this topic the following is found in the OED.

  > Although *ill* is not etymologically related to evil, the two words have from the 12th cent. been synonymous, and *ill* has been often viewed as a mere variant or reduced form of *evil*. This especially in Scots,

[39] For reference see Morris: 1864.

where *v* between two vowels early disappeared, and *devil*, *even*, *Levenax*, *preve*, *shovel*, *Steven*, became *deil*, *ein*, *Lennox*, *pree*, *shool*, *Steen*, so that *evil* might have become *eil*; hence, in 15–16th cent. Scots, *euil, euyl* is found often written where *ill* was the word pronounced (cf. "ill, adj. and n.". *OED Online*. http://oed.com /view/Entry/91345?rskey=rDDUHW&result=1).

- *sick*, adj.: a common Germanic word derived from the OE *seoc*, its first meaning in the OED being "[s]uffering from illness of any kind; ill, unwell, ailing" (cf. "sick, adj. and n.". *OED Online*. http://oed.com/view/Entry/ 179187?rskey=KDCvz3&result=1).

Results of the corpus analysis:

1. Frequency: There are 119 instances of *sick* compared to 55 tokens of *ill*.
2. Period: Both tokens are almost equally present in all four quarters of the ME period.
3. Dialect: While *sick* is documented in all five ME dialects (only 1 example from Kentish), the instances of *ill* are recorded in East Midland and Northern dialects only.
4. Genre: The *sick* tokens can be found in a wide variety of text types whereas *ill* predominates in religious treatises.

Interpretation:

Concerning the above mentioned etymological dilemmas, discussing this pair appears to be a difficult task. In the case of *sick* vs. *ill*, the dialectal distribution of *ill* tends to confirm the OED evidence of its Scandinavian origin.

4. a) and_CONJ lufe_VB +tam_PRO to_TO prayse_VB **ill**_ADJ **dedes**_NS to_TO syng_VB mare_QR for_P lovy

   b) and_CONJ than_ADV this_D holy_ADJ mann_N waxyd_VBD **seke**_ADJ **and**_CONJ **feble**_ADJ

The meaning of the two words seems to be quite different after taking the analysed results into consideration. On that account, the rivalry between the two words is rather difficult to assess. The word *sick,* one the one hand, has the

today's meaning 'sick, ill', and the word *ill,* on the other, the meaning 'evil'. The tokens of *sick* appear in phrases such as *seke and feble* or *seke yn his bed* whilst *ill* often occurs in phrases like *ille vices* or *ille dedes* (See example 4).

5. 1. 11. *Fellow* vs. *†yfere*

According to Björkman (1902: 209), *fellow* belongs to the group of "words the Scandinavian origin of which is tolerably certain". This word pair consists of a common Scandinavian loanword and a word that is now obsolete.

Definition and etymologies:

- *fellow*, n.: the late OE *feolaga* is derived from ON *felage*, the analysis of the word being the following:

  > Old English *feoh* property, money […] + *lag-* (in Old Norse *leggja* , Old English *lęcgan* < Old Germanic **lagjan*) *to lay v.*[1] The primary sense is 'one who lays down money in a joint undertaking with others'; the related Old Norse *félag* strong neuter is 'a laying together of money', a business partnership, hence a partnership or society generally […] (cf. "fellow, n.". *OED Online*. http://oed.com /view/Entry/69094?rskey=j2kA3p&result=1).

The most important meaning is found under number 3 of the OED entry:

> **3. a. *good* or *jolly fellow***: an agreeable or pleasant companion; usually, one who is fond of feasting and good company, a convivialist (cf. "fellow, n.". *OED Online*. http://oed.com/view/ Entry/69094?rskey=j2kA3p&result=1).

- *†yfere*, n.: is now an obsolete item derived from the OE *gefera* with the meaning 'a companion, fellow, mate, associate' (cf. "†yfere, n.". *OED Online*. http://oed.com/view/Entry/231696?rskey=WPzt6E&result=1).

Results of the corpus analysis:

1. Frequency: There 116 tokens of *fellow* and 9 examples of *†yfere* in the corpus.

2. Period: All but 1 token of *ƭyfere* are from the first quarter of the ME period whereas 106 out of 116 instances of *fellow* is discovered in the second part of ME.
3. Dialect: 56 out of 116 instances of *fellow* come either from the East Midland or the Northern dialect of the ME; East and West Midland is where *ƭyfere* is equally present.
4. Genre: *Fellow* can be discovered in all genres, without any special remarks whilst *ƭyfere* appears mostly in historical texts.

Interpretation:

The evidence of the 'extinction' of ME *ƭyfere* is quite clear from the research results. The native word is far less frequent in the corpus, and the vast majority of tokens appear in the earliest stages of the ME period. The fact that its gradual disappearance coincides with the introduction of *fellow* clearly points to a beginning of a change in the English lexicon. As in many cases of this research, the dialectal distribution appears to be vital in explaining these changes. It cannot be emphasised often enough that the dialectal regions with the highest frequency of *fellow,* i.e. regions that are later crucial in forming modern English, are at the same time regions with heaviest Scandinavian settlement.

5. 1. 12. *Egg* vs. **ei*

This pair presents another case of two etymologically similar forms with the same sense, in which case it seems that the Scandinavian form influences the selection of the later well-established English form.

Definition and etymologies:

- *egg*, n.: according to the OED derived from OE *ǽg* and claimed to have the same etymology as *ei* (cf. "egg, n.". *OED Online*. http://oed.com/view/Entry/59878?rskey=RBBEUu&result=1). In the MED there is the following explanation under the same entry:

This ON word appears first in the N and the nEM dialects beside the (historically corresponding) native **ei**, which predominates elsewhere throughout the ME period (cf. “eg(ge (n.(1)) *MED online*. 15 December 2012. http://quod.lib.umich.edu/cgi/m/mec/medidx?type=id&id=MED13064).

- **ei*, n. (MED data): as it has no separate entry in the OED, here is the information from the MED:

  Ei (n.(1)) Also æ3e, aye. Pl. eiren, eire. [OE *æ*g, pl. *æ*gru.]
  1a.The edible egg of a domesticated fowl, esp. a hen's egg
  (cf. “ei (n.(1))” *MED online*. 15 December 2012. http://quod.lib.umich.edu/cgi/m/mec/medidx?type=id&id=MED13109/).

Results of the corpus analysis:

1. Frequency: There are 18 instances of *egg,* as opposed to 5 tokens of **ei*.
2. Period: The tokens of *egg* are found slightly later than those of **ei*: most instances of *egg* are from the last quarter of the ME period (M4) while the examples of its equivalent are from the third quarter (M3).
3. Dialect: 16 tokens of *egg* are from the Northern dialect with the remaining 2 belonging to the East Midland. On the other hand, 3 instances of **ei* are from the Southern dialect with East Midland and Kentish dialects having 1 example each.
4. Genre: Most of the examples from both tokens are discovered in a handbook of medicine.

Interpretation:

The case of *egg* vs. **ei* presents an example of a rivalry between two words remarkably similar in form. According to the OED (cf. "egg, n.". *OED Online*. http://oed.com/view/Entry/59878?rskey=RBBEUu&result=1), both words share the same etymology, whereas *egg* is influenced by its Scandinavian cognate. After some time of coexistence, *egg* ‘imposes’ itself as a stronger of the two and ousts its counterpart from its slot in their word field.

The results of the corpus analysis clearly demonstrate the dominance of *egg* tokens: it appears more in the texts, the tokens are more frequent in the later

parts of the ME period and its dialectal distribution, with 16 out of 18 instances belonging to the East Midland dialect, points to Scandinavian influence. The East Midland dialect has a prominent role in forming the present-day English and this is where the most *egg* tokens are found.

5. 1. 13. *Wing* vs. *feather*

The case of *wing* vs. *feather* presents a situation where a change in meaning proves to be crucial in describing the rivalry between the two words.

Definition and etymologies:

- *wing*, n.: derived from ON *vængir* with the meaning 'wing of a bird'; according to the OED it has replaced the OE f*eþra* (cf. "wing, n.". *OED Online*. http://oed.com/view/Entry/229324?rskey=VAVfib&result=1).
- *feather*, n.: derived from OE *feðer* (cf. "feather, n.". *OED Online*. http://oed.com/view/Entry/68811?rskey=kkjvOQ&result=1).

Results of the corpus analysis:

1. Frequency: The frequency of this word pair is almost equal: there are 22 instances of *wing* and 21 tokens of *feather*.
2. Period: 18 out of 21 instances of *feather* appear in the second half of the ME period whereas the tokens of *wing* are equally spread across the whole period.
3. Dialect: The dialectal distribution of the two words is the following:
    - *Feather*: 11 East Midlands, 8 Southern, 2 West Midlands
    - *Wing*: 11 West Midlands, 6 East Midlands, 5 Northern
4. Genre: Both words are almost equally represented in all text genres of the corpus – religious treatise being the genre where *wing* frequently occurs.

Interpretation:

At first glance, the corpus analysis seems to be pointing to anything but a Scandinavian influence and a rivalry showing the prevailing of the ON *wing*. However, key to understanding this pair hides in the change of the meaning at the beginning of the ME period. In the following example (nr. 5) from the first half of ME (M2 to be exact), *feather* still denotes 'wing'.

5. +tou_PRO shalt_MD hope_VB **vnder**_P **hys**_PRO$ **fe+ters**_NS

Later on, in the final quarter of the period, it is clear that *feather* switches to its present-day meaning, especially with the loanword *wing* being in the same sentence (See example nr.6); *feather* clearly denotes 'feather' and not 'wing' as it is used in the expression *feathers of her wings*.

6. and_CONJ bicause_P+N the_D **fethers**_NS **on**_P **her**_PRO$ **wyngis**_NS were_BED to_ADVR shor

To conclude, although the distribution of two words might suggest otherwise, the case of *wing* vs. *feather* shows how the incorporation of the Scandinavian *wing* ousts *feather* out of its 'slot'. This causes the meaning of *feather* to change whilst *wing* establishes itself as the new term for 'wing'. However, it has to be noted that due to the ambiguity of *feather*, there may have been a 'gap' for the word 'wing'.

5. 1. 14. *Scare* vs. *fright*

The initial /sk-/ points to a probable Scandinavian origin of the word *scare*. The next pair is another example of a rivalry between two near synonyms in the ME period.

Definition and etymologies:

- *scare*, v.: derived from ON *skirra* with the meaning 'shy, timid, startled' (cf. "scare, v.". *OED Online*. http://oed.com/view/Entry/172018?rskey=IWs1B0&result=6).

- *fright*, v.: derived from OE **fryhtan*, which is a metathetic variant of *fyrhtan*, its cognate being the modern German *fürchten* (cf. "fright, v.". *OED Online*. http://oed.com/view/Entry/74684?rskey=akevBQ&result=2).

Results of the corpus analysis:

1. Frequency: There are only 5 tokens of *scare* and no tokens of *fright* at all found in the corpus.
2. Period: 4 instances of *scare* are from the first quarter of the ME period (M1) and 1 from the third quarter (M3).
3. Dialect: 3 tokens of *scare* are from the East Midland dialect with 1 token each from the Northern and the West Midland dialect.
4. Genre: The discovered examples greatly differ in genre so that no conclusions can be made.

Interpretation:

There is, unfortunately, not enough evidence for a thorough analysis in the case of *scare* vs. *fright*. Only 5 tokens from one word offer little room for an elaborated conclusion.

However, lack of results is also a result. At least a tentative explanation imposes itself regarding the corpus analysis. The fact that there are no tokens of *fright* found directs to a decline that can be a consequence of the incorporation of foreign elements. Even though solely 5 tokens of *scare* are found in the corpus, the Scandinavian loan exists in the ME texts so that we can assume it has established itself in some way.

5. 1. 15. *Stern/starn* vs. *star*

The case of *stern/starn* vs. *star* is similar to the already analysed case of *egg* vs. **ei*. Two similar words of the same etymology coexist for some time before one dispossesses another. The only difference is that, in this case, a Scandinavian loanword appears to have 'lost the battle'. As it was mentioned in

chapter 5.1., all words are referred to according to their OED entry. Therefore, the word derived from ON is referred to as '*stern/starn*, n.2'.

Definition and etymologies:

- *stern/starn*, n.2: derived from ON *stjarna*; today appears only in Scottish dialects and presents a parallel Germanic formation as opposed to *star* (cf. "stern | starn, n.2". *OED Online*. http://oed.com/view/Entry/189990?rskey=00o1aV&result=2).
- *star*, n.1: a common West Germanic word derived from OE *steorra*; the following definition of its meaning is from the OED.

  > **1. a.** Any one of the many celestial bodies appearing as luminous points in the night sky. Now usually restricted (in scientific and to some extent in popular language), to the *fixed stars* as distinguished from planets […] (cf. "star, n.1". *OED Online*. http://oed.com/view/Entry/189081?rskey=y7uRfb&result=1).

Results of the dictionary data:

1. Frequency: There are merely 10 instances of *stern/starn,* as opposed to 122 tokens of *star*.
2. Period: 8 out of 10 tokens of *stern/starn* appear in the first half of the ME period while the instances of *star* are detected equally throughout the ME period.
3. Dialect: All instances of *starn/stern* are found in the East Midland and the Northern dialect; most tokens of *star* are from the Midland dialects with several examples from Kentish and Southern varieties.
4. Genre: All tokens from *star* are equally distributed in various text types; in the case *starn/stern* religious texts predominate.

Interpretation:

Considering *stern/starn*, Björkman (1902: 220-221) states that "the local distribution of the word favours Scand. origin". Therefore, it can be tentatively assumed that it was the Scandinavian word that ends up disappearing from the English lexicon.

The results of the corpus analysis clearly show the predominance of *star*. Firstly, there is a vast difference in the word frequency in its favour. Secondly, the fact that *stern/starn* appears only at the very beginning of the ME period and *star* throughout most of it shows the decline of the alleged Scandinavian form.

After all the cases that show how Scandinavian words enter the English lexicon and remain there at the expense of the native ones, it is intriguing to observe an exemption to the 'rule'.

5. 2. OE vs. OE word pairs

In the following chapters, the word pairs containing two native words are analysed. It is interesting to observe whether different 'patterns' hold for these pairs in comparison to the already analysed mixed pairs. It is not only due to the interaction with loans that words die out or change their meaning. These changes can also occur when solely native words are involved.

A lot of words from the 'all native' list are chosen with the present-day German in mind. It is a well-known fact that German has a homogenous lexicon consisting mostly of Germanic words. It is also true that OE also had a homogenous lexicon without so many loanwords as present-day English (cf. Blake, 1996: 30-31). As a result, there are many words from German whose cognates existed and were widely spread in OE. In the research of the following word pairs, an answer to the question of what has happened to the native words that still exist in other Germanic languages and not in present-day English is addressed.

5. 2. 1. *Wood* vs. *holt*

This pair of near synonyms consists of a common English word and of a cognate of the modern German *der Holz*, one of its main meanings being 'wood'.

Definition and etymologies:

- *wood*, n.1: derived from OE *widu*, *wiodu*, which later becomes *wudu*; it is apparently derived from Old Germanic **widuz* (cf. "wood, n.1". *OED Online*. http://oed.com/view/Entry/230005?rskey=UvANrp&result=1).
- *holt*, n.1: derived from OE *holt*, its cognate being the Modern High German *der Holz*. Its usage today is exclusively *poetic* and *dialectal*:

  > †**1.** Wood, timber. (Old English only, and doubtful.) […] **2.a.** A wood; a copse. Now *poet.* and *dial.* (Occurs in many place-names and derived surnames.) (cf. "holt, n.1". *OED Online*. http://oed.com/view/Entry/87829?rskey=uobVbX&result=1).

Results of the corpus analysis:

1. Frequency: No examples of *holt* are found in the corpus, whereas there are 77 tokens of *wood* located.
2. Period: No remarks can be made on the temporal distribution of the *wood* tokens.
3. Dialect: The majority of the *wood* tokens are from the Midland dialects (East and West).
4. Genre: All varieties of text genres are equally present.

Interpretation:

Lack of results restricts any further discussion and only vague conclusions can be made. Nevertheless, lack of results is in some way already a result. Without any tokens of *holt*, it can only be assumed that the word already perished before the ME period. The evidence from the dictionaries confirms the existence of the word and its OE usage. It also appears in some ME texts but, unfortunately, not in the texts from the corpus used for this research.

To conclude, today the native word *holt,* whose cognate still exists in present-day German, exists merely in *archaic* and *dialectal* usage. The other Germanic word *wood* still exists in the English lexicon and it is widely used.

5. 2. 2. *Town* vs. *borough*

The next word pair presents another example of two native words being near synonyms in ME while today they have different meanings. It is only in colloquial American variety of English that *burg* (earlier form of *borough*) stands for 'town' while in the *archaic* usage it denotes the same as 'castle' (cf. "burg" *LEO Online Dictionary*. 15 December 2012. http://dict.leo.org/ende?lp=ende&p=_xpAA&search=burg&trestr=0x4001).

Definition and etymologies:

- *town*, n.: derived from OE *tuun*, *tun*, its cognate being the modern German *der Zaun*. Here is the detailed explanation from the OED:

  > **4. a.** In general English use, commonly designating an inhabited place larger and more regularly built than a village, and having more complete and independent local government (esp. one not created a city); applied historically not only to a 'borough', i.e. a corporate town, and a 'city', a town of higher rank, but also to an 'urban district', i.e. a non-corporate town having an 'urban district council' with powers of rating, paving, and sanitation more extensive than those possessed by a parish council or the administrative body (where such exists) of a village. Sometimes also applied to small inhabited places below the rank of an 'urban district' or its equivalent, which are not distinguishable from villages otherwise, perhaps, than by having a periodical market or fair ('market town'), or by being historically 'towns'. The distinction between a small town which is not a municipal borough, and a village, is somewhat indefinite; there are also decayed towns, even municipal boroughs, which are surpassed in population by many villages (cf. "town, n.". *OED Online*. http://oed.com/view/Entry/204044?rskey=jq0nlV&result=1).

- *borough*, n.: a common Germanic word, derived from OE *burg, burh*. Here is the information from the OED:

  > In German and Old Norse the word is recorded chiefly in the primary sense of 'fortress, castle', but there are traces of the sense of 'town, civic community', which is found in Gothic and Old English, and may therefore be assumed to have been developed in Germanic. […] The Danish *borg n.* and French *bourg n.* have also been used by historical writers in special senses (cf. "borough, n.". *OED Online*. http://oed.com/view/Entry/21687?redirectedFrom=borough).

Results of the corpus analysis:

1. Frequency: There are 131 instances of *town* and 101 token of *borough* in the corpus.
2. Period: 91 out of 101 tokens of *borough* appear in the first quarter of the ME period whereas *town* is more homogenously spread over the whole period.
3. Dialect: Both words are almost equally present in the East and West Midland dialects with *town* also appearing in Kentish and Southern dialects.
4. Genre: Concerning genre, it can be noted that both words appear often in historical texts.

Interpretation:

The fact that the vast majority of the tokens of *borough* appear at the very beginning of the ME period shows an unquestionable decline in its distribution. A change in the meaning cannot yet be confirmed from the corpus. In case of these examples, no conclusions can be made from the words' frequency and dialectal distribution.

However, it can be concluded that in spite of the information available today, those two words exist more or less simultaneously in the ME period. Moreover, their meaning does not change significantly throughout it. Perhaps the frequency of the tokens of *town* in the later stages of the period proves to be decisive in that word's preservation of meaning and *borough*'s shift in it.

5. 2. 3. *Food* vs. *meat*

In the ME period, as in the case of *town* vs. *borough*, *food* and *meat* are also near synonyms. To be precise, both words have the meaning 'food'. In present-day English, *food* kept that meaning while the meaning of *meat* has *specialised* to 'a particular type of food' i.e. 'meat'.

By looking at the examples from the corpus, the tokens' meaning is analysed, and any start of a semantic change is sought. Can reasons for the subsequent change in meaning be found in the corpus? Is this change in meaning a consequence of the rivalry between synonyms in the ME period? Perhaps the analysis of this word pair can shed some light in an attempt to answer these questions.

Definition and etymologies:

- *food*, n.: derived from OE *foda* and has the same Germanic base as the verb *feed* (cf. "food, n.". *OED Online*. http://oed.com/view/Entry/72632 ?rskey=08ZQ15&result=1).
- *meat*, n.: derived from a Germanic base, which is possibly derived from the Indo-European, its cognate being the Latin *madere* with the meaning 'to be wet, succulent, fat' (cf. "meat, n.". *OED Online*. http://oed.com/view/Entry/115517?rskey=QqpVtJ&result=1).

Results of the corpus analysis:

1. Frequency: There are 507 instances of *meat* and 50 tokens of *food* in the corpus.
2. Period: 41 out of 50 tokens of *food* appear early in the ME period, whereas the tokens of *meat* are equally spread of all four segments of the ME period.
3. Dialect: The East and West Midland dialects are where the most tokens of *food* are equally present. On the other hand, the instances of *meat* are dominant in the East Midland dialect, although they are also quite present in all other dialects.
4. Genre: The instances of *meat* appear predominantly in religious texts, but other genres are also noted. The same holds for the tokens of *food*, though it must be noted that there are fewer tokens of *food* than those of *meat* recorded in the corpus.

Interpretation:

In the following example (See example nr. 7) from the corpus, the compound *flesch-mete* stands for 'meat' and *whyt-mete* for 'dairy products' or 'eggs'. It is clear that *mete* means 'food' and not 'meat'.

7. most_MD fast_VB from_P all_Q maner_N **flesch**_N **mete**_N **and**_CONJ **whyt-mete**_ADJ+N

After inspecting all examples of *food* and *meat* from the corpus, an intriguing situation can be described. Although *food* has not changed its meaning and denotes 'food' in present-day English, whereas *meat* denotes 'meat', the results of the corpus analysis suggest that *meat* should be in a 'better position' to maintain its original meaning.

There are far more instances of *meat* than *food* in the corpus. In other words, the distribution does not suggest any decline or change of meaning. *Food*, on the other hand, shows all 'symptoms of a decline': it is far less frequent and most of its tokens appear at the very beginning of the ME period.

Therefore, it can be concluded that in the case of *food* vs. *meat*, the interpretation of the distribution patterns points in the 'wrong direction'. Taking the evidence from the corpus into account, especially if the patterns from the analysis of the Scandinavian vs. native word pairs are followed, an opposite situation would be expected.

5. 2. 4. *Neck* vs. *halse/hals*

The next word pair is chosen on the basis of the information from the OED (cf. "neck, n.1". *OED Online*. http://oed.com/view/Entry/125652?rskey=udm0wJ&result=1) that the today widely acknowledged word *neck* is rarely used in the OE as opposed to its near synonyms *halse* and *swire*. On the basis of corpus information, an insight into the development of *halse* from a well-established word to a subdued word is inspected.

Definition and etymologies:

- *neck*, n.1: a cognate with Modern High German *der Nacken*, etymology of the word is uncertain. According to the OED:

  > In Old English the word is comparatively rare; the general sense of 'neck' is usually expressed by the words *heals* and *swēora* (cf. "neck, n.1". *OED Online*. http://oed.com/view/Entry/125652?rskey =udm0wJ&result=1).

- *halse/hals*, n.: a common Germanic word derived from the OE *hals*, *heals*, previously derived from Old Germanic **holso-z* that is derived from the pre-Germanic **kolsos* (cf. "halse | hals, n.". *OED Online*. http://oed.com/view/Entry/83648?rskey=U9pkYy&result=1).

Results of the corpus analysis:

1. Frequency: There are merely 3 instances of *halse* as opposed to 52 tokens of *neck* in the corpus.
2. Period: 49 out of 52 tokens of *neck* appear in the second half of the ME period whereas 2 from 3 tokens of *halse* appear in the first quarter of the period (M1).
3. Dialect: Most of the tokens of *neck* (25) belong to the West Midland dialect while the rest is equally divided between Southern and East Midland. Out of 3 instances of *halse*, 2 come from East Midland and 1 from the Northern dialect.
4. Genre: Lack of religious texts is one trait that is common for both constituents of this word pair.

Interpretation:

To sum up, the case of *neck vs. halse/hals* is interesting because there is a total shift of 'leading roles' among the members of this word field. To be more specific as to this word pair, the native word *neck* is allegedly rare in the OE period with *halse* being the dominant one (together with the OE *swire*).

In the ME period, as it is clear from the corpus analysis, the changes occur and *neck* imposes itself as the dominant term for 'neck'. This tendency has been

kept up to today with the situation being similar as in the ME. How can this be explained?

This surprising turn of events can perhaps be explained by the higher frequency of *neck* in ME, especially in the Midland dialects. It seems that *halse/hals* does not express enough stability to maintain its superior role in the corpus. Therefore, it has been gradually subdued to a rather rarely used item.

5. 2. 5. *Speak* vs. *†mele*

This word pair presents one of the most frequently used words in English i.e. *speak* and its OE near synonym *†mele*, the latter being obsolete in present-day English.

Definition and etymologies:

- *speak*, v.: according to the OED, *speak* is derived from the OE *sprecan.* It is not recorded in Gothic and it is absent from older Scandinavian. It becomes common in the 11th century and beyond the middle of the 12th century, the forms with *r* do not survive in actual use (cf. "speak, v.". *OED Online*. 15 December 2012 http://oed.com/view/Entry/185910?rskey=lWQ6kO&result=2).
- *†mele*, v.: derived from the Germanic base of the OE *mæþel* and in OE period already mainly in poetic texts (cf. "†mele, v.". *OED Online*. http://oed.com/view/Entry/116085?rskey=ACKDrU&result=3).

Results of the corpus analysis:

1. Frequency: There are 989 instances of *speak* and only 5 tokens of *†mele*.
2. Period: All 5 tokens of *†mele* appear in the earliest segment of the ME period whereas the distribution of *speak* gives a rather homogenous picture.

3. Dialect: *†Mele* is recorded 3 times in East Midland and twice in the West Midland dialect. The distribution of *speak* is presented in detail due to its high frequency:
    - East Midland: 549
    - Kentish: 40
    - Northern: 59
    - Southern: 75
    - West Midland: 266
4. Genre: Religious texts including the Bible prevail concerning this aspect of the research.

Interpretation:

In the case of *speak vs. †mele*, the numbers are clear and decisive. To speak in terms of a competition, it can be said that *speak* is the unquestionable 'winner of the contest'.

The number of tokens of *speak* vastly supersedes those of *†mele*, which all appear only at the very beginning of the ME period. Of all examples of *speak*, considerable number belongs to the East Midland dialect, decisive in the forming of modern-day English.

To sum up, this is a clear case of one word dispossessing its equivalent from the same word field and subduing it to the margins of the modern-day English usage.

5. 2. 6. *Sorrow* vs. *woe*

The next pair presents a situation where two native words, with similar meaning in ME, survive up to today, without any fundamental change of meaning – except for the fact that the meaning of one word, i.e. *woe*, has become generally *poetic*. To avoid unnecessary confusion, only nouns are included in the research; *Sorrow* can also function as an adjective and *woe* as an adjective or an adverb.

Definition and etymologies:

- *sorrow*, n.: derived from the OE *sorh, sorg* and is cognate with the Modern High German *die Sorge* (cf. "sorrow, n. and adj.". *OED Online*. http://oed.com/view/Entry/184935?rskey=YtzecX&result=1).
- *woe*, n.: derived from the OE *wa,* its present-day meaning is chiefly *poetic* (cf. "woe, int., and adv., n., and adj.". *OED Online*. http://oed.com/view/Entry/229821?redirectedFrom=woe).

Results of the corpus analysis:

1. Frequency: There are 262 instances of *sorrow* and 154 tokens of *woe* in the corpus.
2. Period: Only 20 examples of *woe* appear in the first half of the ME period whereas 201 out of 262 tokens of *sorrow* are found in the other half.
3. Dialect: The combination of 99 tokens from West Midland and 43 from East Midland makes the Midland dialects a source of the vast majority of the instances of *woe*. Concerning the dialectal spread of *sorrow*, the same situation can be determined.
4. Genre: No specific remarks can be made about the findings beside the large number of religious treatises. This cannot be considered as a surprise because of the domination of religious text types in the corpus.

Interpretation:

Unfortunately, the results of the corpus research are not conclusive. Hence, beside the superior word frequency of *sorrow*, there are no further conclusions based on the four parameters of the corpus analysis.

The following example (See example Nr. 8), from the last segment of the ME period, which comes from a text labelled as *Romance*, shows that the meaning of *woe* may have become of somewhat *poetic* character already in the ME period.

8. and_CONJ we_PRO be_BEP worthy ADJ **to** TO **suffyr** VB **wo** N. We_PRO fynd_VBP in_P pro

Therefore, it can be concluded that the two near synonyms from the ME period, *sorrow* and *woe*, still exist in present-day English and that their meaning remains approximately the same. The only possible difference that can be vaguely discerned is that the usage of *woe* has become mostly *poetic*. This turn of events can only be anticipated by the much higher word frequency of *sorrow* in the ME corpus. However, due to lack of extensive analysis of the meaning, this interpretation cannot be supported by the research results and it should be regarded tentatively.

5. 2. 7. *Dog* vs. *hound*

Present-day German *der Hund*, which is the cognate of *hound*, has the exact meaning of the present-day English word *dog*. The two words are near synonyms in ME with *hound* being a common Germanic word and the etymology of *dog* being uncertain and highly speculative as the OED data suggests.

Definition and etymologies:

- *dog*, n.1: of an unknown origin according to the OED, with all explanations being rather speculative:

> The etymology of the English word is unknown. No likely cognates have been identified with a meaning at all close to that of the English word, and all attempted etymological explanations are extremely speculative. A word of this phonological shape is hard to explain as a regular development from a Germanic base, but nonetheless a number of attempts have been made. One attempt sees a connection with the Germanic base of *dow* v.[1], assuming an original meaning such as 'useful or faithful animal', but this has not met with general acceptance. In this connection an Old English personal name *Dycga* is sometimes compared as a possible formal parallel from the same base, but it is quite possible that the personal name has no connection with *dog* n.[1] Another attempted etymology takes the word ultimately from the Indo-European base probably meaning 'run' which is probably reflected by Sanskrit *dhav-* […], but this poses a number of formal difficulties. Another suggestion is that the

word shows a development from an Indo-European base meaning 'to be or become unconscious', but this involves a very large number of unattested stages in the semantic development (assuming a development 'bundle' > 'cuddly bundle' > 'pet' > 'dog'), and also involves a very uncertain original base form. […] The word belongs to a set of words of uncertain or phonologically problematic etymology with a stem-final geminated *g* in Old English which is not due to West Germanic consonant gemination and therefore does not undergo assibilation. These words form both a morphological and a semantic group, as they are usually Old English weak masculine nouns and denote animals (cf. "dog, n.1". *OED Online*. http://oed.com/view/Entry/ 56405?rskey=oMUC7H&result=1).

- *hound*, n.1: a common Germanic word derived from the OE *hund*, which comes from the Old Germanic **hundo-z* (cf. "hound, n.1". *OED Online*. http://oed.com/view/Entry/88855?rskey=ntUuOI&result=1).

Results of the corpus analysis:

1. Frequency: There are 21 instances of *dog* and 28 tokens of *hound* in the corpus.
2. Period: 25 out of 28 tokens of *hound* appear in the second half of the ME period whereas the tokens of *dog* appear equally often throughout the epoch.
3. Dialect: 25 out of 28 tokens of *hound* are found in the East Midland dialect, whereas the examples of *dog* appear equally often in the East and West Midland dialects of ME.
4. Genre: No specific remarks can be made concerning the genre of these tokens.

Interpretation:

According to the dictionary data, the meaning of *hound* has *narrowed* over time and now has the sense 'special kind of dog', e.g. dog used in hunting etc. This statement can be supported by a couple of examples (See example Nr. 9) from towards the end of ME period to show that this tendency already originates in that same period.

9. a) ther_EX myght_MD neuer_ADV **hunter**_N ne_CONJ **hounde**_N saue_VB ne_CONJ kepe_VB hym_PRO from_P vs_PRO /_.

   b) fro_P the_D **hunters**_NS and_CONJ fro_P the_D **houndes**_NS yf_P they_PRO were_BED so

To sum up the findings from the corpus, it has to be emphasised that no patterns stand out. There are no valuable conclusions that can be made from the results of the research. Both words have the same frequency as well as the temporal and dialectal distribution in the ME period.

5. 2. 8. *Black* vs. *swart*

According to the OED (cf. "black, adj. and n.". *OED Online*. http://oed.com/view/Entry/19670?rskey=XQCO7U&result=1), *black* has not been always the dominant word describing this colour. There is an equivalent word in the OE period, more widely used than *black*, and its cognate is the Modern High German word *schwarz*.

Definition and etymologies:

- *black*, adj.: a word of rather uncertain etymology; the semantic history is described in the OED as follows:

  > Comparative evidence indicates that *swart* adj. shows the reflex of the more usual colour term for 'black' in early Germanic (as still in Old English), which has gradually been replaced by *black* in this basic meaning in English. Compare the following Old English quotation, in which the basic Latin colour term *niger* is glossed as *swart* adj., while two other semantically similar words are rendered by *black* adj.: OE Ælfric Gram. (Durh.) 27 *Niger* sweart, *ater* blac, *teter* blac. […] Metaphorical and figurative uses of words meaning 'black' with negative connotations similar to those found in English are widespread in other European languages, frequently in an antonymic relationship with senses of words meanings 'white' (cf. "black, adj. and n.". *OED Online*. http://oed.com/view/Entry/19670? rskey= XQCO7U&result=1).

- *swart*, adj.: common Germanic, derived from OE *sweart*; its cognate being the modern German word meaning 'black' i.e. *schwarz*. According to the OED:

  > While surviving as the regular colour-word in the Continental languages, it has been superseded in ordinary use in English by *black* (cf. "swart, adj. and n.". *OED Online*. http://oed.com /view/Entry/195502?rskey=D3QlUQ&result=1).

Results of the corpus analysis:

1. Frequency: There are 107 instances of *black* and 15 tokens of *swart* in the corpus.
2. Period: All tokens of *swart* are from the first quarter of the ME period (M1) whereas 87 out of 107 tokens of *black* appear in the second half of the ME period.
3. Dialect: More than half tokens of *black* belong to the East Midland dialect, the examples of *swart* being equally divided between the East and West Midland dialects.
4. Genre: It is interesting to note that a great deal of *black* tokens appears in handbooks of astrology and medicine. 15 tokens of *swart* do not show any significant genre distribution worth discussing.

Interpretation:

From the results of the corpus analysis, the information that the OED provides can be unquestionably confirmed. Firstly, the frequency of *black* tokens vastly outnumbers those of *swart*. Secondly, all tokens of *swart* are from the first quarter of the ME period, which shows not only their decline but their disappearance from ME texts.

To sum up, the information from the OED and the corpus analysis results clearly show the rivalry between *black* and *swart* and its eventual resolution. As the OED data shows, in the OE period both *black* and *swart* exist, *swart* being the more widely used item in describing things 'of colour black'. In the course of time, rather early in the ME period, *black* establishes itself as a more dominant

term, ousting *swart* into marginal usage. This situation has remained until present-day English.

5. 2. 9. *Fowl* vs. *bird*

The case of *fowl* vs. *bird* is quite similar to the one of *dog* vs. *hound*, to give another analogy to a word pair belonging to the 'animal kingdom'. Two words that are near synonyms in the ME, both shared the meaning 'bird' and have survived to present-day English. The only difference is that the meaning of *fowl* has *specialised,* e.g. to cooking jargon.

Definition and etymologies:

- *fowl*, n.: a common Germanic word derived from the OE *fugel, fugol* and its cognate is the modern German word *der Vogel* (cf. "fowl, n.". *OED Online*. http://oed.com/view/Entry/74043?rskey=Lm4cKD&result=1).
- *bird*, n.: according to the OED, the etymology of *bird* is unknown and it has no equivalent form in any other Germanic language. The ME forms *byrd* and *bryd* are supposed to be derived from the OE *brid*. The following excerpt from the OED deals with the connection of *bird* and *fowl*:

  > **2.** […] Now used generically in place of the older name *fowl n.*, which has become specialized for certain kinds of poultry, and by sportsmen for wild ducks and wild geese. In this sense, *bird*, Middle English *brid*, is found in the south *c*1300; it appears to have been extended from the young of birds […] (cf. "bird, n.". *OED Online*. http://oed.com/view/ Entry/19327?rskey=HtsjWO& result=1).

Results of the corpus analysis:

1. Frequency: There are 48 tokens of *bird* and 19 instances of *fowl* in the corpus.
2. Period: 33 out of 48 instances of *bird* appear in the first half of the ME period whereas 11 out of 19 tokens of *fowl* appear in the second part of the ME period. It has to be pointed out, however, that of those 11 tokens, 10 belong to a single text.

3. Dialect: 29 tokens of *bird* belong to the West and 18 tokens to the East Midlands dialect; 14 tokens of *fowl* are from the East Midlands dialect.
4. Genre: Concerning *bird,* the predominating genre is the religious treatise and in case of *fowl* – travelogue.

Interpretation:

It is interesting to note that only one token of *bird* presents the current and not metathetic form of the word. The example number 10 illustrates this.

10. trust_N in_P hym_PRO whiche_WPRO fedith_VBP **birdes**_NS and_CONJ clotheth_VBP lilyes_NS ._. CMAELR4,23

The frequency of *bird* tokens is clearly higher than the frequency of *fowl*. Therefore, it can be speculated that this might be the reason *bird* emerges as the general term for 'bird' at the top of the 'hierarchy'. Today, *fowl* still remains in the lexicon with a restricted usage.

As in many examples of Scandinavian words displacing the native ones for a slot in the respective word fields, in case of *fowl* vs. *bird*, there is again a 'confirmed' native word that forfeits. Since the etymology of *bird* appears unknown and highly problematic, it might easily be said that a 'foreign element' again prevails over the (certainly) native one.

5. 2. 10. *Tree* vs. *beam*

The next pair of near synonyms presents a rivalry between the nowadays well-established expression for 'tree' and the cognate of its Modern High German counterpart *der Baum*. As it is clear from the analysis, *tree* 'has won' the competition but *baum* remains in the lexicon with a different meaning.

Definition and etymologies:

- *tree*, n.: derived from OE *treow* and *triow* further derived from Old Germanic **trewo-*. Further information on word form as cited in the OED:

> The modern English *tree* is a regular repr. of Old English *tréo*, Middle English *treo* ; *trē* is the form in the Bestiary of *c*1220; but the final prevalence of this over the other Middle English forms *treow*, *trew*, *trow*, *trau*, was probably assisted by its coincidence with Norse *tré*; *trē*, *tree* are the northern forms from *Cursor Mundi* onward (cf. "tree, n.". *OED Online*. http://oed.com /view/Entry/205416?rskey=e89vFl&result=1).

- *beam*, n.1: common Germanic word, derived from OE *beam* meaning 'tree', its cognate being the Modern High German word *der Baum*. The following information from the OED gives important information on the word's sense, especially in connection to its equivalent *tree*:

  > It remains uncertain whether the original sense was 'tree' as a kind of plant, or 'tree' as a wooden stem, stock, or post: Old English had both meanings, but that of (growing) 'tree,' the regular sense in the continental languages, is (exc. in a few compound names) lost in modern English, where the word has received many transferred applications, among which that of *beam of light*, *sun-beam*, is remarkable (cf. "beam, n.1". *OED Online*. http://oed.com/view/ Entry/16505 ?rskey=Fx4W1l&result=1).

Results of the corpus analysis:

1. Frequency: There are 152 instances of *tree* and 20 tokens of *beam* in the corpus.
2. Period: 15 out of 20 tokens of *beam* appear in the second half of the ME period whereas the examples of *tree* are equally spread over it.
3. Dialect: Comprising around 60 tokens each, the Midland dialects are where the tokens of *tree* are localised most. In case of *beam*, the above mentioned dialects are most frequently present.
4. Genre: No specific remarks can be made on the subject of the character of the texts.

Interpretation:

As it is clear from the OED data, both ME expressions for 'tree' still exist in the English lexicon, although one has changed its meaning, roughly speaking, to 'beam of light' and is obsolete in the sense of 'tree'.

The frequency of *tree* in the corpus, as opposed to that of *beam*, points to a wider usage of *tree*. In addition, there is an already discernible shift of meaning. Majority of *beam* tokens found in the corpus do not express the sense 'tree' but the nowadays used 'beam of light', 'ray' etc.

Therefore, it can be concluded that the cognate of Modern High German well-established term for 'tree', is ousted already in the ME period by its native equivalent *tree*.

5. 2. 11. *Sea* vs. *†brim*

This word pair consists of two near synonyms with different 'fate' in the English lexicon.

Definition and etymologies:

- *sea*, n.: derived from OE *sæ,* which is itself derived from the Germanic **saiwi-z,* its cognate in Modern High German is the masculine noun *der See* meaning 'lake' and the feminine *die See* 'sea' (cf. "sea, n.". *OED Online*. http://oed.com/view/Entry/174071?rskey=Wvd5m3&result=1).
- *†brim*, n.1: derived from OE *brim*; already in ME, this word is of poetic and regional character, appearing mainly in the north; it becomes obsolete already in the ME period (cf. "†brim, n.1". *OED Online*. http://oed.com/view/Entry/23344?rskey=QgL3we&result=1).

Results of the corpus analysis:

1. Frequency: There are 182 instances of *sea* and no tokens of *†brim* in the corpus.
2. Period: 136 out of 182 tokens of *sea* appear in the first half of the ME period.
3. Dialect: The majority of the instances of *sea* are located in the East Midland dialect; there is a significant number of tokens from the West Midland as well.

4. Genre: Concerning the genre, the text types that predominate are of historical and religious character.

Interpretation:

Unfortunately, there are no examples of *†brim* found in the corpus. Although the dictionary data informs that *†brim* is already in decline during the ME period, at least a single example would have been expected.

These 'extreme' results demonstrate that *sea* has emerged 'victorious' in the competition between two words, and that *†brim* is not only restricted to limited sense and usage but has utterly disappeared from the English lexicon. A native word can disappear from the lexicon without it having to be in competition with a foreign word.

5. 2. 12. *Ring* vs. *bee*

This word pair includes one widely used item i.e. *ring* and its counterpart that is now obsolete and in decline already in the ME period. These two native near synonyms are chosen to inspect why one has survived and the other has not.

Definition and etymologies:

- *ring*, n.1: derived from OE *hring* and the following excerpt is about its meaning throughout the history of English:

  > Many of the early meanings in English are paralleled in a number of other early (West and frequently also North) Germanic languages, including both (physical) ring or other hollow circular object, especially of metal (as worn on the finger, arm, etc., or forming part of chain mail, or for linking things, or for hanging things from) and circle (cf. "ring, n.1". *OED Online*. http://oed.com/view/Entry/166069?rskey=SFpErs&result=1&isAdvanced=false).

- *bee*, n.2: common Germanic word, derived from OE *beag, beah*, itself a derivation from Germanic **baugo-z* meaning 'ring' (cf. "bee, n.2". *OED Online*. http://oed.com/view/Entry/16942?rskey=XyXUtZ&result=2).

Results of the corpus analysis:

1. Frequency: There are 15 instances of *ring* and a single token of *bee* in the corpus.
2. Period: The only token of *bee* is from M3 whereas the 15 tokens of *ring* are equally divided between the early and later stages of the ME period.
3. Dialect: The tokens of *ring* appear predominantly in the Midlands varieties of the ME whereas the single token of *bee* belongs to the Southern dialect.
4. Genre: The only notable finding is several tokens of *ring* in an astrology handbook.

Interpretation:

A single token of *bee* shows that this word practically disappears already in the ME period. It is interesting to note that there are not many examples of *ring* as well. The presence of the majority of *ring* tokens in the Midland dialects might be decisive in explaining its preservation in the English lexicon.

5. 2. 13. *Quell* vs. *slay*

The case of *quell* vs. *slay* is a case of two native words widely used in the OE and ME periods. This comes as no huge surprise because numerous texts at the time depict acts of violence and killing. Nowadays, as the dictionary data shows, both words are subdued by *kill* in its most general sense.

Definition and etymologies:

- *quell*, v.1: derived from OE *cwellan,* previously derived from the Germanic base *quale v.*, its cognate being the modern German *quälen*. The main sense that prevails during the ME period is now obsolete:

  ‘To kill, put to death (a person or animal); to strike so as to kill’.

  The following two meanings are still active according to the OED:

- ‘To crush or overcome (a person or thing); to subdue, oppress; to reduce to submission, silence, etc.’
- ‘To put an end to, suppress, extinguish (a thing or state of things, esp. a bad or disagreeable one); *esp.* to put down (an uprising, riot, etc.)’ (cf. "quell, v.1". *OED Online.* http://oed.com/view/Entry/156257?rskey=WdGK9b&result=3).

- *slay*, v.1: a common Germanic word derived from OE *slean*, its cognate being the Modern High German *schlagen*. Here is the meaning as recorded in the OED:

  > **5. a.** (a) To strike or smite so as to kill; to put to death by means of a weapon; also generally, to deprive of life by violence. In this sense […] and in other surviving uses, *slay* is now mainly confined to literary and rhetorical language, the common word being *kill* (cf. "slay, v.1". *OED Online*. http://oed.com/view/Entry/181536?rskey=gBIGmT&result=3).

Results of the corpus analysis:

1. Frequency: There are 65 instances of *quell* and 267 tokens of *slay* in the corpus.
2. Period: 59 out of 65 instances of *quell* appear in the third quarter of the ME period (M3), all 59 being from the same text as well. Concerning the temporal distribution of *slay*, 201 out of 267 tokens are found in the second half of the ME period.
3. Dialect: 59 out of 65 examples of *quell* are localised in the West Midland dialect of the ME. However, it has to be pointed out that all tokens originate from one single text. 136 out of 267 tokens of *slay* are found in the West Midland dialect. It can, therefore, be concluded that West Midland dialect is where most tokens of both words appear.
4. Genre: The fact that 59 tokens of *quell* are found in a single text means that so many belong to one genre. The tokens of *slay* are more or less equally divided among several genres; hence no specific remarks could be made here.

Interpretation:

As it is available from dictionary data, in present-day English *slay* is limited to literary usage whereas *quell* does not denote 'to kill' (as explained above). The results of the analysis show that both words are rather frequent in ME, especially *slay*. Further, both words appear more frequently in the later period of ME and are mostly present in the West Midland dialect.

It can be summarized that both words have wide usage in the ME period, *slay* being more frequent in general. Today, both words still exist in the lexicon, one being of rhetoric and literary character, while the other's meaning changed. In the end, both words are ousted by the word *kill* (cf. "kill, v.". *OED Online*. http://oed.com/view/Entry/103361?rskey=ECF9QW&result=5), which is a well-established word for the meaning in question.

5. 2. 14. *Many* vs. *†fele*

The next word pair presents a particularly common word i.e. *many* and its ME near synonym *†fele*, which has become obsolete. The Modern High German *viel*, which is a cognate of ME *†fele*, is also a common word. In this chapter, the reasons for the disappearance of *†fele* (and the perseverance of *many*) are discussed.

Definition and etymologies:

- *many*, adj.: derived from the OE *mænig,* its variation is depicted as following by the OED:

  > Variation in Old English in the vowel of the first syllable, between *e* (occasional) and *a* or *o* (common), is due to the presence or absence of i-mutation, itself caused by the substitution of the suffix **-īg* for **-æg* in very early Old English. […] The late West Saxon form *mænig* is probably due to low stress. […] In Middle English the form with *a* in the first syllable is recorded from most parts of England. The form with *e* comes from scattered locations throughout the south-west, southern counties, and Essex. The form with *o* is recorded in a broad band stretching from Lancashire, through the west midlands, and into the south-west as far as Somerset (roughly speaking the area in which rounding of Germanic *a* before nasals is

preserved in Middle English), and also in the far north of England and southern Scotland (cf. "many, adj., pron., and n., and adv.". *OED Online*. http://oed.com/view/Entry/113819?redirectedFrom=many).

- *†fele*, adj. 2: derived from the OE *feolo, feolu*, which is previously derived from Old Germanic **felu* and pre- Germanic **pélu,* its cognate being the modern German *viel* (cf. "†fele, adv. (and n.) and adj.2". *OED Online*.http://oed.com/view/Entry/69042?rskey=03Ecd0&result=2&isAdvanced=false).

Results of the corpus analysis:

1. Frequency: There are 239 instances of *many* as opposed to 147 tokens of *†fele* in the corpus.
2. Period: 135 out of 147 tokens of *†fele* appear in the first half of the ME period, the vast majority being from the first quarter of the epoch (M1). The same pattern holds for the majority instances of *many*.
3. Dialect: *†Fele* appears most often in the East Midland and *many* in the West Midland dialect, the Midland dialects being where the vast majority of the two words are found.
4. Genre: Both words appear almost exclusively in the texts of religious character (e.g. religious treatise, Bible and sermon).

Interpretation:

Although the word frequency of *many* with almost a hundred tokens more than *†fele* is unquestionably higher, a sum of 147 tokens of *†fele* is also quite high. From this data it can be deduced that both words are quite common at the same sub periods of the ME period and that they are spread almost equally among the Midland dialects.

All this makes it even more surprising that *†fele* has disappeared totally from the English lexicon and is now an obsolete word. With no other information from the corpus, it leaves the research with the conclusion that the superior

word frequency proves to be decisive in the competition between the two words.

5. 2. 15. *Cut* vs. *carve*

At first, this pair was part of the Scandinavian vs. OE list because it is mentioned in various sections on Scandinavian lexical influence.[40] However, after consulting the dictionaries, I have decided to include these two words in the OE vs. OE list. To discuss the pair at the end of the research is not a coincidence.

The problem presented above has happened quite often in the course of this research. It is not always easy to distinguish between Scandinavian loanwords and native items, although some handbooks might point otherwise. Hence, it is often not clear whether there is a rivalry between a foreign element and a native one, or just pure competition among native members of the English lexicon.

Definition and etymologies:

- *cut*, v.: although it is labelled as a Scandinavian loanword in several handbooks on language history of English, this notion is merely mentioned in the OED and certainly not confirmed, whereas MED has absolutely no such records:

> Found in end of 13th cent., and in common use since the 14th cent., being the proper word for the action in question, for which Old English used *sníðan* , *ceorfan* […]The word is not recorded in Old English (nor in any West Germanic dialect), and there is no corresponding verb in Romanic. Modern Norwegian *kutte* = *skjære* to cut (chiefly used by sailors) is certainly adopted < English; but a verb *kåta*, (*kutå*) = *skära*, *hugga* to cut, is widely diffused in Swedish dialects, and apparently an old word, from an Old Germanic stem **kut-*, **kot-*, which is probably the source also of the English vb., whatever the intermediate history of the latter (cf. "cut, v.". *OED Online*. http://oed.com/view/ Entry/46341?rskey=fTfmch&result=4).

[40] E.g. cf. Baugh & Cable (1993: 99).

- *carve*, v.: common Germanic word derived from the OE *ceorfan with the meaning 'to cut'* and according to the OED "formerly the ordinary word for that action in all its varieties" (cf. "carve, v.". *OED Online*. http://oed.com/view/Entry/28349?rskey=jTflTD&result=2).

Results of the corpus analysis:

1. Frequency: There are 20 instances of *cut* compared to 9 tokens of *carve* in the corpus.
2. Period: 18 out of 20 tokens of *cut* appear in the second half of the ME period whereas the instances of *carve* follow the similar pattern concerning its time distribution with 6 out of 9 tokens being from the later period of ME.
3. Dialect: The tokens of *carve* are equally distributed among the two Midland dialects; the dialectal distribution of *cut* shows a clear domination of the East Midland dialect; the West Midland variety closely following suit.
4. Genre: A common trait for both words is the relative lack of religious texts, when compared to other word pairs.

Interpretation:

There are twice as many tokens of *cut* in the corpus and the vast majority of these tokens appear in the East Midland dialect. The meaning of the two words has not changed drastically from the ME period up to now i.e. they were near synonyms then and they remain to be so, with the only remark that *cut* has established itself as the widely used term for a more general sense while *carve* has become slightly *specialised*, its usage being of a technical character (e.g. in cooking, agriculture etc.).

Previous claims are also supported by the OED, as well as the corpus analysis results, in stating that *carve* was "the ordinary word for that action" (cf. "carve, v.". *OED Online*. http://oed.com/view/Entry/28349?rskey=jTflTD&result=2). Given the research results, a rather late incursion of *cut* into the lexicon can

suggest its foreign origin i.e. various claims for its Scandinavian origin would be supported by the corpus results.

As already mentioned at the beginning of this particular analysis, this word pair can be regarded as a micro-example for all problems surrounding the notion of the establishment of the Scandinavian words. To begin with, it is only with great difficulty that it can be established whether certain words are of Scandinavian origin or not. Although the dictionary data do not offer anything conclusive, the research results imply some foreign interference. To add more ‘misery’ to the scholar, there is the question of lexical change deep in the field of semantics. To apprehend the meaning of words from the corpus can be a difficult and sometimes impossible task although all adjacent words are looked up in the etymological dictionaries.

6. Summary, conclusion and outlook

The purpose of this paper is to analyse how Scandinavian words establish themselves in the English lexicon during the ME period. The paper includes a corpus analysis of two sets of word pairs (15 word pairs each), one set including a Scandinavian and an OE word and the other set consisting of two OE words. The texts used are from the *Penn-Helsinki Parsed Corpus of ME* and the texts have been browsed with the concordance program *Antconc*.

The first half of the paper includes a summary of the key factors on lexicology and lexical borrowing as well as the most prominent historical events surrounding the Vikings. Since the contact between the Scandinavians and the Anglo-Saxons is crucial for the linguistic exchange, the circumstances of their cohabitation are summarised. The theoretical part also includes the most significant features of the language contact and interference as described in linguistic handbooks on Scandinavian lexical influence and/or lexical change in general in the ME period.

There are four parameters considered for the analysis of the results from the corpus i.e.:

1. the token **frequency**,
2. the ME sub-**period** of token occurrence (M1 – M4),
3. the **dialect**al affiliation of the tokens and
4. to which text **genre** the tokens belong.

The analysis of the word pairs also includes the OED data; this is mainly to establish the words' etymology and look for occurrences of words that are not localised in the corpus. At the end of each (word pair) analysis, a conclusion comprising an interpretation of all data is provided. This last chapter in this paper includes the following:

- a recapitulation of everything that has been done,
- a summary of the results from all word pairs,

- a discussion on whether the research question has been answered at all and
- the problems encountered as well as ideas for further research.

As a brief summary of everything that this paper includes has already been provided, the results of the research are now presented. In order to present them more clearly, two tables have been assembled (See Tables 3 and 4):

Table 3 Results in numbers SC vs. OE. (15 WPs)[41]

After the analysis of every single word pair, including the interpretation of the results, a search for patterns starts. In other words, the situations concerning all word pairs are evaluated on the basis of their individual 'fate'. The first column of both tables includes all word pairs encompassing a word that disappears or is suppressed to marginal usage of the English lexicon. For example, the first

[41] WP = word pair.

column of Table 2 presents all cases where a Scandinavian word dispossesses its native equivalent.

As it is shown in Tables 3 & 4, the majority of examples in both cases (particularly in SC vs. OE table) fall into the category marked by a 'disappearance' of one word. In the case of SC vs. OE word pairs, it means that a Scandinavian word i.e. an introduction of a Scandinavian word into the lexicon ousts its OE equivalent and causes either its disappearance or its marginalisation.

There are seven word pairs each in both tables' columns containing the previously explained situation. The next column also contains word pairs consisting of one dominant and one 'subdued' word, the notable difference being that here, the so-called 'subdued' word does not disappear but changes its meaning. There are only two such pairs in the SC vs. OE table compared to six in the OE vs. OE table.

The fact that a change of meaning occurs more in OE vs. OE pairs could be regarded as a difference between the two word pair rivalries. If one wishes to acknowledge this difference, it might be interpreted as follows: in the case of Scandinavian presence a 'conflict' resolves in one word's favour, i.e. word tends to disappear and not 'merely' change its meaning. In the case without the Scandinavian presence, an eventual change of meaning occurs almost as often as a word disappearance. However, this interpretation is not supported by convincing evidence. Lack of hard evidence and the nature of the process of word selection are just a few reasons why nothing conclusive can be ascertained. Perhaps after a much more detailed research, involving significantly larger number of word pairs, that this argument can be reassessed.

To name more difficulties in interpreting the results, in the third column of the Table 3 there are four word pairs that do not fit into this explanation. These four pairs present 'unexpected' results i.e. results that show this research might not get all the expected answers. The case of the following four word pairs is merely a small example why the interpretation from the previous paragraph ought to be taken with extreme caution. They are the following:

- *skirt vs. shirt*: no tokens of the alleged Scandinavian word found!
- *bloom vs. blossom*: no tokens of the alleged Scandinavian word found!
- *sky vs. heaven*: only 2 tokens of the Scandinavian loanword found,
- *scare vs. fright:* only 5 tokens of the Scandinavian loanword found with no tokens of the OE counterpart.

These word pairs cause difficulties as they do not help answer questions rather help raise more. The Scandinavian words like *skirt* and *sky* are often listed as show-examples of Scandinavian lexical influence, especially due to the initial /sk-/, which is supposed to confirm their origin. How can this be explained? If these 'confirmed' Scandinavian loans[42] do not exist in the ME corpus, should the dictionary data be questioned? That is probably not true. A simple answer could be that the incorporation of Scandinavian words occurs later on, after the ME period.[43] Nevertheless, the lack of tokens of these words is a surprise that paves the road to other potential theories of the origin of these words.

In the analysis of OE vs. OE word pairs, a phenomenon worth highlighting is observed in cases of *black vs. swart* and *neck vs. hals*. There is an almost complete 'shift of power' in the rivalry of the two pairs i.e. a dominant OE word according to the OED[44] has become less prominent and the less dominant word has become the new well-established word for a certain notion. Interestingly enough, the two words that have been marginalised in the course of time are widely used modern German words for these notions.

Most of the word pairs from SC vs. OE list show how Scandinavian words have suppressed their equivalents and how they have remained the widely established words up to today. With the previous paragraph in mind, one could say that there are no examples of Scandinavian words being subdued once they are more dominant. Nevertheless, it has to be pointed out again that the selection of word pairs for the research favours Scandinavian loanwords that have survived. The Scandinavian words are gathered from the linguistic handbooks dealing almost exclusively with loans that are still to be found in the

[44] See chapter *black vs. swart*.

English lexicon. This may be an incentive for further research that involves more word pairs as well as Scandinavian loanwords that have not survived to be part of the present-day English lexicon.

At the beginning of this research, a question is raised as whether it means that a word has 'won' if it overtakes a general meaning of a word and causes its meaning to *narrow*. One could argue that this might be true due to the higher frequency of the word with a wider meaning. For example, in the case of *die vs. starve*, *die* covers all possible means of dying whereas *starve* stands only for that kind of dying involving food deprivation. It sounds logical that a word for all kinds of dying is used more often than for one particular way of it. From the majority of the word pair analyses, it is exactly the word frequency and the more productive repeating of a word that proves to point towards its maintenance in the English lexicon.

Concerning the SC vs. OE word pairs, there is the case of *star vs. stern/starn*, where a Scandinavian word ends up disappearing. This is merely an assumption. However, due to the similarity between two words, that proves to be a real problem. When it comes to determining whether a very similar form, in fact, comes from another language or not, it could just as well be that a regional or dialectal variant suddenly appears because it has been previously not recorded.

It would be useful if a wider research could be done, a research including more word pairs. More than fifteen pairs each would have been too many for the purposes of this paper. A research with at least fifty pairs each would certainly be more informative. Another idea for further research could be adding word pairs consisting of loanwords from other languages e.g. French, Latin, and Celtic etc. to see what patterns would occur in such situations. To be perfectly honest, further research would have to deal with *meaning* in greater detail. In other words, all texts of the corpus need to be analysed carefully so that the meaning of each token can be established as accurately as possible. It is the first quarter of the ME period that is particularly difficult, the language being closer to OE than ME. With the amount of time and space foreseen for this

paper, a detailed analysis of the meaning of every single token from the corpus has simply not been possible.

The question of how Scandinavian loanwords established themselves in the English lexicon during the ME period is the main research question of this paper. An attempt to answer this complex question starts in the field of lexicology and lexical borrowing and then continues with a historical journey to Medieval England and the *Age of Vikings*. The beginnings of serious Scandinavian linguistic influence start with the Danelaw and culminate in England being ruled by a Danish king i.e. Canute. The fact that the Scandinavian vernacular has become the language of the ruling class has given it higher prestige and certainly has facilitated the absorption of Scandinavian linguistic material into English.

With all this information at hand, the analysis of the already mentioned word pairs could commence. As the tables at the beginning of this chapter show, the outcome of the rivalry between selected words is not always the same. Before the outcome of this rivalry is summarised, a few lines are dedicated to the arrival of the loanwords.

The majority of Scandinavian loanwords enter the English lexicon during the ME period, some of them already in the OE period. However, the changes happen faster in spoken language than in written and there is only written language from these periods at our disposal. On account of this, Scandinavian words probably appear in everyday speech much earlier than the written records show. This could also be the reason why tokens of some allegedly common Scandinavian loans are not found in the corpus.

Luckily, the majority of words are found in the corpus as registered in the dictionary data. Those words are subjected to the previously mentioned four parameters of research. The parameter of **text genre** does not prove to be as useful as expected. It appears that the text types of the majority of analysed words could not help determine which word has a better position to 'survive the contest'. Very rarely, almost exclusive appearance in religious texts pointed to a *specialisation* in usage. Unfortunately, there are so many texts of a religious

character in the corpus that their frequent occurrence does not come as a surprise at all. This parameter perhaps needs to be excluded from potential further research.

The other three parameters i.e. **frequency, period and dialect** provide valuable information and help 'paint a picture' of the establishment of Scandinavian words. Firstly, as it can be seen from individual analyses**, token frequency** proves to be decisive because it usually foreshadows a 'long life' in the lexicon. It is partly due to a wide usage and frequent occurrence that Scandinavian loans remain in the English word stock and do not disappear when the *Age of Vikings* ends.

Secondly, to know the ME **sub-period** when the majority of tokens occur is also of significant value. If tokens of one word appear almost exclusively at the beginning of ME, a decline is probably underway. On the other hand, if tokens of a word appear more as the end of ME approaches, one could say that this word could be on the way of becoming a regular member of the lexicon. Thirdly, the **dialectal distribution** of tokens has proved to be important for two reasons:

- to establish which words dominate in the area previously pertaining to the Danelaw
- to establish which words dominate in the area most important for the subsequent standardisation of English i.e. East Midlands

It is therefore the East Midland dialect that holds the key to numerous Scandinavian words in present-day English. This dialect belongs to the territory once called the Danelaw, which is where, especially in the north, the heaviest Scandinavian settlements occur. In his historical introduction to the English language, Barber (2000: 144-145) explains the formation of "The New Standard English" and states the following:

> In England […] the new standard language which arose in the late Middle Ages was not descended from the West Saxon literary language. It was in fact based on the East Midland dialect of Middle English. This was probably due to the importance of the East Midlands in English cultural, economic, and administrative life. One

> of the two universities, Cambridge, was in this area. It was an extremely important commercial area, as well as being a rich agricultural region: we have to remember that, before the Industrial Revolution, the North of England lacked the economic importance that it has today: it was a primitive region, economically and socially backward compared with the South; and Norwich was one of the great cities of England at a time when Leeds, Liverpool, Manchester, and Sheffield were comparatively insignificant. Above all an East Midland dialect was the basis of London speech, and London was the seat of government and the cultural centre of the nation, besides being by far the largest city in the country. The London dialect was in fact rather a mixed one, but in the fourteenth century it seems to have been basically East Midland in type, with influences from the neighbouring South Eastern and Southern dialects.[…] Modern English has forms descended from the East Midland dialect of Middle English, itself mainly descended from the Mercian dialect of Old English.

It can be concluded that the corpus analysis of this paper shows how Scandinavian loanwords have entered the English lexicon from the heaviest settlements in East Midlands and by frequently occurring there, they have found their way into the English Standard. Main problems involve similar forms between Scandinavian and OE equivalents. This study has proved that, in several cases, it cannot be confirmed whether a word comes from ON or from a dialectal variant of OE. In the OE period, West Saxon is the standard variety but it loses that status during the ME period.

Although the OE vs. OE word pair analysis shows approximately similar patterns in the rivalry between foreign and native, as well as all native constituents, some differences are visible. The research has shown that all native pairs more often involve a change of meaning as an outcome of a rivalry than mixed ones. Perhaps a rivalry between exclusively native words leads more often to a meaning change because Scandinavian elements tend to dispossess its native counterparts fully. However, these claims have to be taken tentatively since not enough evidence exists to support them. Future studies may reveal whether there is something to be pursued here or not.

It is a fact that modern English has a lot of Scandinavian words in its lexicon. The character of these everyday words is more valuable than their sheer number. It cannot be pointed out with certainty why Scandinavian words had

the ‘upper hand’ over their OE counterparts. The sociolinguistic situation in the Danelaw, where the two peoples lived side-by-side certainly plays in favour of Scandinavian words, as also does the importance of East Midlands, the region of heavy Scandinavian settlement that emerges as crucial in forming the present-day English.

German abstract

Die vorliegende Arbeit beschäftigt sich mit dem skandinavischen lexikalischen Einfluss auf die englische Sprache in der mittelenglischen Periode (ca. 1100 – 1450 n. Chr.). Es handelt sich dabei um eine korpusbasierte Forschungsarbeit. Bei der Untersuchung von in den etymologischen Wörterbüchern ausgesuchten Wortpaaren wird genau beobachtet, wie sich die skandinavischen Lehnwörter im Englischen etabliert haben.

Der erste Teil der Arbeit, der theoretische Teil, besteht aus einer Zusammenfassung der Grundbegriffe der Lexikologie und lexikalischen Entlehnungen sowie aus einem historischen Überblick der Ansiedlung der Skandinavier im angelsächsischen England. Die skandinavischen Siedlungen, die letztendlich einen dänischen König in England zur Folge hatten, werden mit besonderer Rücksicht auf die sprachlichen Auswirkungen des Zusammenlebens der zwei Völker zusammengefasst.

Im empirischen Teil der Arbeit werden weiterhin insgesamt dreißig Wortpaare in einem Korpus, das aus zahlreichen mittelenglischen Texten besteht, durchgesucht. Fünfzehn Wortpaare bestehen aus einem skandinavischen Lehnwort und einem einheimischen Wort, während die anderen fünfzehn aus zwei einheimischen Wörtern zusammengesetzt sind. Die Wortpaare wurden selektiert, um die Interaktion der zwei Wörter zu beobachten und damit auszuforschen, wie die Wörter um einen eigenen Platz im Wortschatz des Englischen ‚kämpfen'. In dem Sinne wird besonders auf die Unterschiede zwischen Wortpaaren mit und ohne ein Fremdwort geachtet. Genauer erklärt, die Erforschung der beiden Wortpaarlisten sollte die Frage beantworten, wie sich die skandinavischen Wörter in dem englischen Wortschatz etabliert haben und ob sich die Art der Rivalität zwischen den Wortpaaren mit einem Fremdwort und denen ohne ein Fremdwort wesentlich voneinander unterscheidet.

Obwohl aus der Forschungsresultaten ziemlich erkennbar ist, dass manche Beispiele der skandinavischen Lehnwörter ihr einheimisches Äquivalent

verdrängt haben, ist der Umfang der Analyse zu gering, um eine endgültige Feststellung zu bieten. Darüber hinaus bemerkt man, dass es im Wettbewerb zwischen fremden und einheimischen Wörtern kaum wesentliche Unterschiede gibt. Die skandinavischen Wörter, die in der mittelenglischen Periode gekommen sind, existieren immer noch im Englischen, und zwar sehr oft auf Kosten von verdrängten einheimischen Wörtern. Es könnte aber vorläufig festgestellt werden, dass sich die Art und Weise, wie sich diese Lehnwörter durchgebracht haben, nicht wesentlich von dem Wettbewerb zwischen einheimischen Wörtern unterscheidet.
